

ISO 9001, ISO 14001, OHSAS 18001

GENERAL

QUALITY, EXTERNAL AND INTERNAL ENVIRONMENT

Due attention to quality assurance and external/internal environmental issues is an essential part of our tradition at Tour & Andersson, Ljung, Sweden. So naturally enough we were one of the first companies in our industrial sector in 1986 to obtain ISO 9001 certification. Today our quality system is a well-established element of our production process, enhancing reliability for ourselves, our customers and our suppliers.

We also led the way in terms of environmental auditing. We have enjoyed certification of ISO 14001 since 1998. All metal waste and defective components are recycled by re-melting on-site. We treat and recycle our industrial waste water and organic waste is composted, all with a view to minimising our impact on the environment.

Since 2008, we have also been one of the first companies to enjoy OHSAS 18001 certification. Safety is high on the agenda and we care for our employees.

Our production unit in Brežice, Slovenia obtained ISO 9001 certification in 2008.
