More scope for innovation

FIRE PROTECTION PROGRAMME PART 2

RESPONSIBILITY FOR PEOPLE AND ASSETS

NORBERT FIGGE, ARCHITECT, DETLEFSEN&FIGGE ARCHITECTURE FIRM, KIEL

Fire protection means preventing the outbreak and spread of fire and smoke.

The protection of health and life is of utmost importance to the people located within the building.

That's why specific requirements on fire resistance period and fire behaviour, based on a classification of the type and usage of the building, need to be fulfilled.

The objective is to provide the rescue and fire fighting teams with a sufficiently safe environment to evacuate the people from the building and, where applicable, bring any valuable objects to safety.

The quality of the building materials used often plays a decisive role in determining whether a fire is able to spread unhindered or is contained at the seat of the fire and able to be extinguished quickly and successfully.

In the case of German public buildings, the properties of escape routes is regulated on the basis of the fire protection ordinances of the German Länder. These stipulate, for example, that the escape routes must remain intact and smoke-free for a specified period of time. They must not contain any flammable building materials or furnishings and must be segregated into individual fire zones.

By rigorously adhering to the fire protection ordinances during planning and implementation, lives can be saved and material and intangible damages minimized.

AMF has been manufacturing special and certified fire protection systems for this purpose for several decades. AMF's in-house and field technicians can provide support both in the planning and implementation phase of any building project that has fire protection requirements.

We have restructured our product catalogues to make it easier for you to find what you are looking for.

This is Part 2 of our catalogue series; it contains our fire protection ceiling products.

Parts 1 and 3 – 6 of our catalogue series contain comprehensive information about our other product lines.

You can obtain these catalogues by filling out the reply card at the end of this catalogue or simply by downloading them from www.amfceilings.com

STRUCTURAL FIRE PROTECTION

Structural fire protection involves classifying the suspended ceiling together with the soffit and the grid installation as a whole.

AMF THERMATEX ceilings achieve building component classifications of F30 to F120 depending on the type of soffit. We have developed special fire protective ceilings for certain applications:

- System F30 under gang-nail truss
- System F90 under timber joists and trapezoidal decking

INDEPENDENT FIRE PROTECTION

Independent fire protection ceilings are tested for their fire resistance period irrespective of the type of soffit located above. They offer up to 30 minutes of fire protection from above and below:

- F30 Uno / + Metal
- F30 Dual + Metal
- F30 Mono

FIRE CLASSIFICATION

Building material classification

The EN 13501-1 standard is used to assess and classify building materials according to their fire behaviour.

It sets the requirements for the materials on the surface of building components, e.g. ceiling claddings, i.e. their behaviour when in direct contact with radiant heat or flames.

The classification into combustible and non-combustible building materials doesn't describe the intrinsic behaviour of the material. The behaviour under fire load depends on the surface type and form, the presence of bonding agents, the processing technique used, etc. The certifications are therefore only valid for the building material or composite building material actually tested. Other compositions can exhibit a less favourable fire behaviour.

The A2-s1,d0 class corresponds to the national building-regulation term: "non-combustible".

AMF THERMATEX panels are classified as A2-s1,d0 in accordance with EN 13501-1 and are therefore "non-combustible". The material class is mostly printed on the rear of the panel as well as on the packaging labels.

Test certificates are available on request.

Building component classification

According to EN 1365-2 (fire load from "below") and EN 1364-2 (fire load from "below" and "above"), not only are the suspended ceilings relevant to the achievement of the individual fire resistance classed but also the construction as a whole, i.e. the soffit located above, as well as installations such as light fittings, loudspeakers, anemometers, etc. that need to be suspended separately from the soffit.

The suspended ceiling and soffit should prevent the passage of fire and temperature for as long as possible. This time is called the fire resistance period, e.g. > 30 minutes.

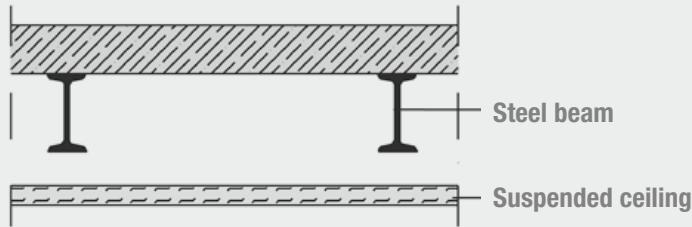

This fire resistance period is defined in the fire resistance classes and determined on the basis of EN 1363-1 in consideration of the criteria for testing.

Fire resistance class	Fire resistance period in minutes
F30	> 30
F60	> 60
F90	> 90
F120	> 120

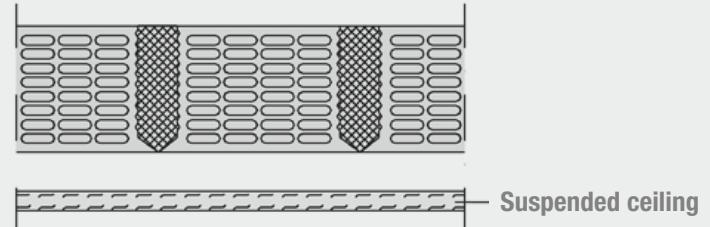

SOFFIT CONSTRUCTION TYPES AS PER DIN 4102 PART 2

TYPE I SOFFIT CONSTRUCTION

RIBBED CONCRETE SOFFIT

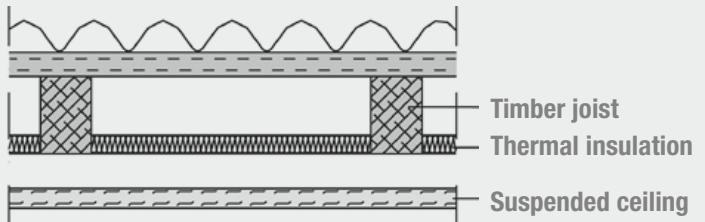

SPECIAL CEILINGS

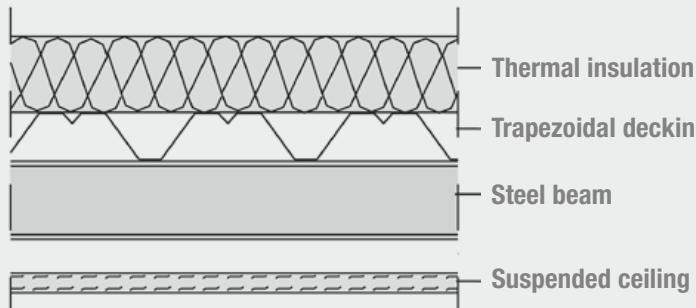

UNDER TIMBER JOISTS

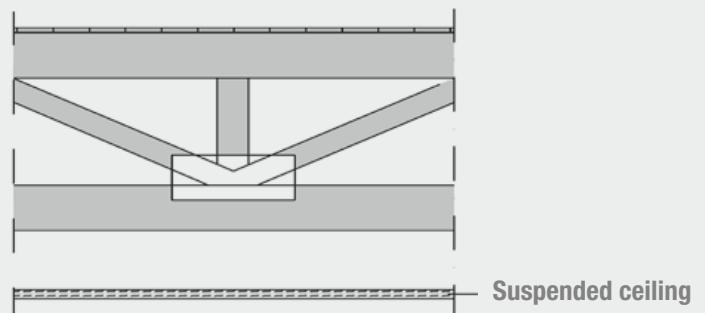

UNDER TIMBER ROOF

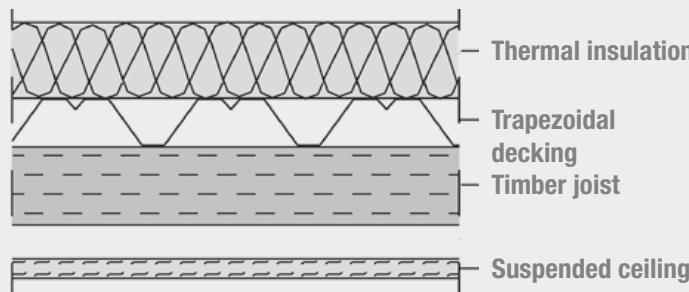

UNDER TRAPEZOIDAL DECKING ON STEEL BEAMS

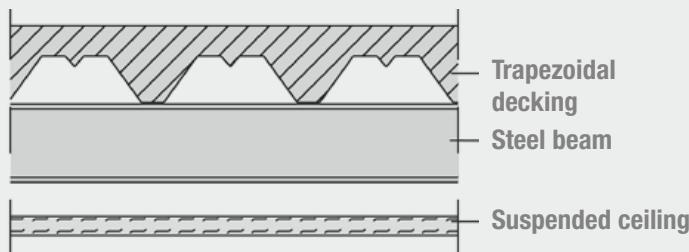

UNDER GANG-NAIL TRUSS

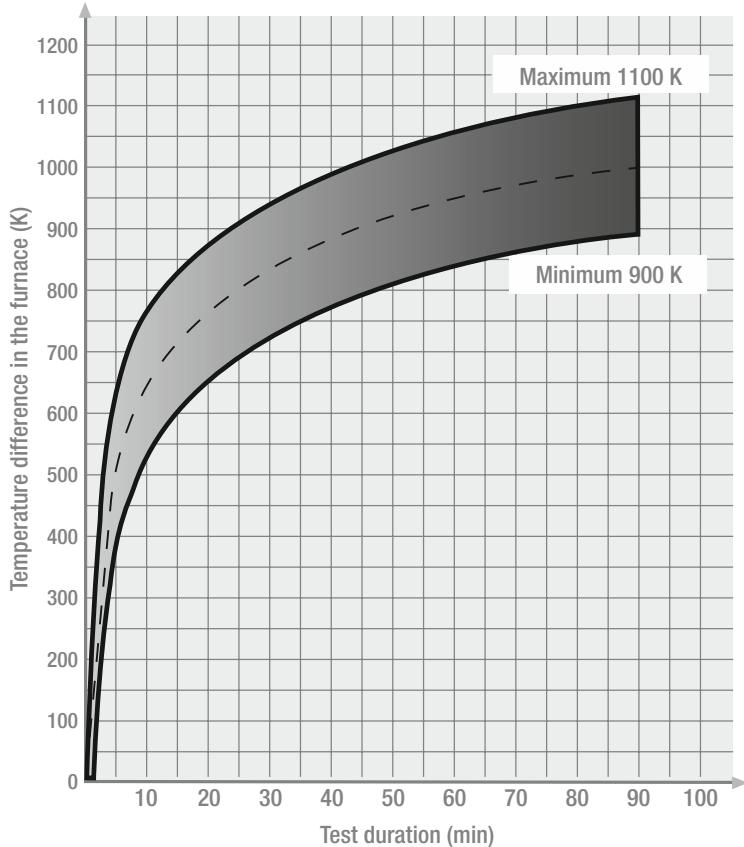

UNDER TRAPEZOIDAL DECKING ON TIMBER JOISTS

CONCRETE-FILLED TRAPEZOIDAL DECKING ON STEEL BEAMS

FIRE TESTS

- The light-weight suspended ceiling and the grid construction located above are installed and tested in a fire chamber.
- The tests are conducted on the basis of a so-called "standard temperature curve" (see image) in nationally and internationally accredited test institutes.

Standard temperature curve

PREREQUISITES FOR CLASSIFICATION

- The suspended ceiling must remain intact for the entire duration of the test.
- The deflection of the suspended ceiling must not exceed the permitted maximum loading.
- The surface temperature rise on the side opposite the fire must be no greater than 140 K on average and no greater than 180 K at any measurement point.

Dependence of structural fire protection on the soffit

TEST CERTIFICATES	Soffit type as per DIN 4102			AMF panels			Test certificate No.
	I	II	III	Building material class	Thickness	Ceiling module size	Tested certificate No
	Aerated concrete d=125 mm	Reinforced concrete d=50 mm	Reinforced concrete d=50 mm				
System solution	Fire resistance class				mm	mm	
SYSTEM A - concealed system

SYSTEM C – exposed system							
		F30	under gang-nail truss	A2 - s1,d0	15	600 x 600 625 x 625 and rips	3478 / 7612

Further test certificates are available from AMF Technical support on request: Tel: +49 (0) 8552 - 422 - 53

STRUCTURAL FIRE PROTECTION

In the case of structural fire protection, not only the suspended ceiling but also the structure as a whole is of relevance to the achievement of a particular fire resistance class. AMF ceilings achieve building component classifications of F30 to F120 depending on the type of soffit. We have developed special fire protection ceilings for certain applications:

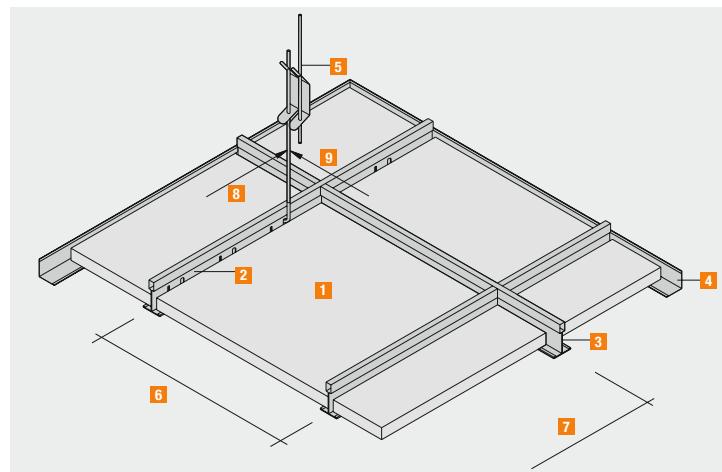

AMF FIRE PROTECTION CEILINGS

THERMATEX

- System F30 under gang-nail truss
- System F90 under timber roof / trapezoidal decking

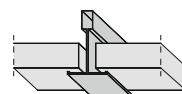

SYSTEM F30 under gang-nail truss

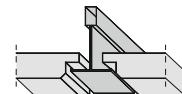

- 1 AMF - THERMATEX panel, 15 mm
- 2 Main runner, 24 x 38 mm
- 3 Cross tee, 24 x 38 mm
- 4 Wall trim, 24 x 24 mm
- 5 Quick-assembly suspension hanger
- 6 Max. module dimension, 625 mm
- 7 Max. module dimension, 625 mm
- 8 Max. distance between hangers, 1250 mm
- 9 Max. distance between main runners, 1250 mm

Test certificates must be adhered to.

Exposed System

Having further developed and recertified the tried-and-proven F30 under gang-nail truss System in both the recessed and square-edged versions, we have not only secured a decisive technical advantage on the market both for ourselves and for you, but also achieved a range of rationalization effects.

You will benefit from these in a number of ways!

AMF has tested the exposed System C for F30 under gang-nail truss in various applications, e.g. discount and regular supermarkets, factories and workshops, etc.

Wall trims / Hangers...

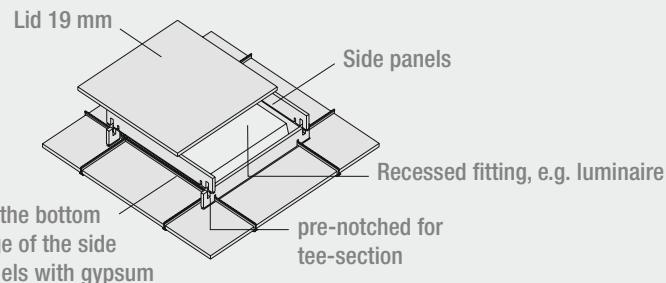

Fire resistant light boxes for recessed fittings for fire protection ceilings, all as per test certificates

Module size: 600 x 600 mm / 625 x 625 mm / 1200 x 600 mm
300 x 1200 mm / 312.5 x 1250 mm

Panel thickness: 19 mm

Internal height: 100 mm

Other formats and heights available on request

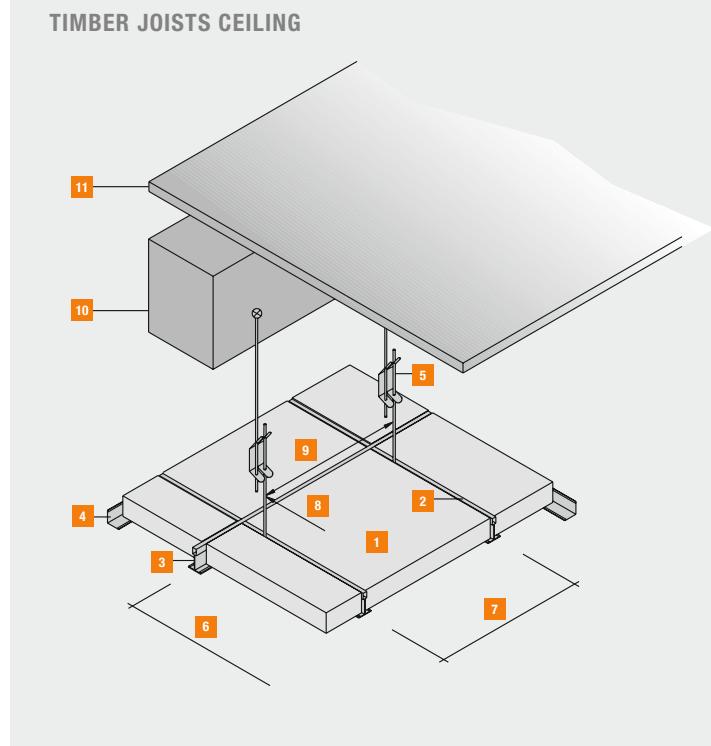

Test certificates must be adhered to.

Fire Resistant Light Box

SYSTEM F90 under timber joists / trapezoidal decking

- 1 AMF - THERMATEX panel, 40 mm
- 2 Main runner, 24 x 38 mm
- 3 Cross tee, 24 x 38 mm
- 4 Wall trim, 24 x 24 mm
- 5 Quick-assembly suspension hanger
- 6 Max. module dimension, 625 mm
- 7 Max. module dimension, 625 mm
- 8 Max. distance between hangers, 900 mm
- 9 Max. distance between main runners, 625 mm
- 10 Timber joist
- 11 Covering boards (24 mm), or particle board (19 mm)

Test certificates must be adhered to.

Under Timber Joists

The AMF F90 functional ceiling under timber joists or trapezoidal decking is equally suited for installation in old buildings and modern industrial halls. Stringent demands on fire resistance are often made when renovating old buildings with timber roofs.

Using the F90 functional ceiling as per certificate under timber you can achieve the fire resistance class F90, even for old buildings, without having to clad the timber joists. This ceiling is also outstandingly suited for installation under trapezoidal decking, as used in modern industrial buildings.

AVAILABLE FORMATS

- 600 x 600 / 625 x 625 mm, further formats available on request

TIMBER JOISTS CEILING WITH PLASTER

Cladding of the
wooden beams
with lathwork

TRAPEZOIDAL DECKING ON E.G. STEEL BEAMS

- 1 AMF - THERMATEX panel, 40 mm
- 2 Main runner, 24 x 38 mm
- 3 Cross tee, 24 x 38 mm
- 4 Wall trim, 24 x 24 mm
- 5 Quick-assemble suspension hanger
- 6 Max. module dimension, 625 mm
- 7 Max. module dimension, 625 mm

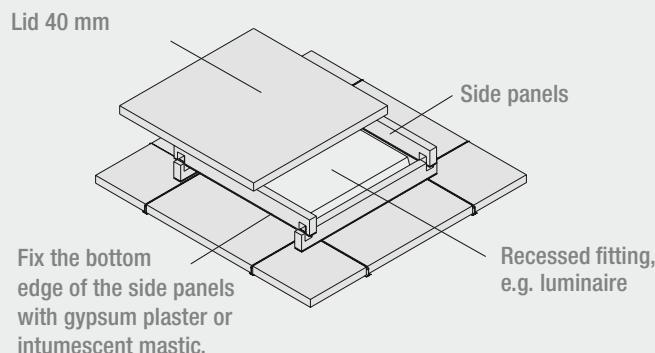

- 8 Max. distance between suspension hangers, 900 mm
- 9 Max. distance between main runners, 625 mm
- 10 Lathwork
- 11 Timber joist
- 12 Covering boards (24 mm), or particle board (19 mm)

- 1 AMF - THERMATEX panel, 40 mm
- 2 Main runner, 24 x 38 mm
- 3 Cross tee, 24 x 38 mm
- 4 Wall trim, 24 x 24 mm
- 5 Quick-assemble suspension hanger
- 6 Max. module dimension, 625 mm
- 7 Max. module dimension, 625 mm

- 8 Max. distance between hangers, 850 mm
- 9 Max. distance between main runners, 625 mm
- 10 Steel beam
- 11 Purlin
- 12 Mineral wool insulation

Test certificates must be adhered to.

Fire Resistant Light Box

Flush-mounted light fitting with fire protection; certified as F90 under timber joists and F90 under purlins.

Module size: 600 x 600 mm / 625 x 625 mm

Panel thickness: 40 mm

Internal height: 80 mm

Other formats and heights available on request

Must be installed as per the test certificate!

Under Trapezoidal decking

INDEPENDENT FIRE PROTECTION

Independent fire protection ceilings, for example, “light-weight suspended ceilings”, fulfil the requirements for fire protection from both the ceiling void (ceiling cavity) and from the underside of the ceiling.

Installations like light fittings, manholes, loudspeakers, pictograms, etc. as well as all connections (such as connectors to light partitions, bulkheads, etc.) also need to be tested and classified.

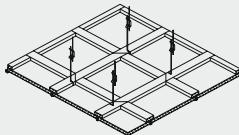

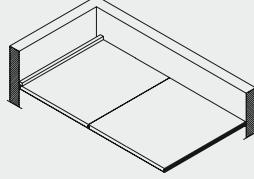

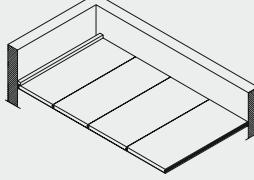

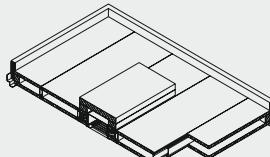

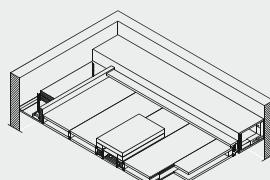

In the event of a fire emanating from the ceiling void (the most frequent fire load by the way), AMF fire protection ceilings protect the escape routes below for 30 minutes protected. These independent fire protection ceilings are rated and classified as “smoke proof“.

AMF FIRE PROTECTION CEILINGS

- F30 Uno / + Metal
- F30 Dual + Metal
- F30 Mono

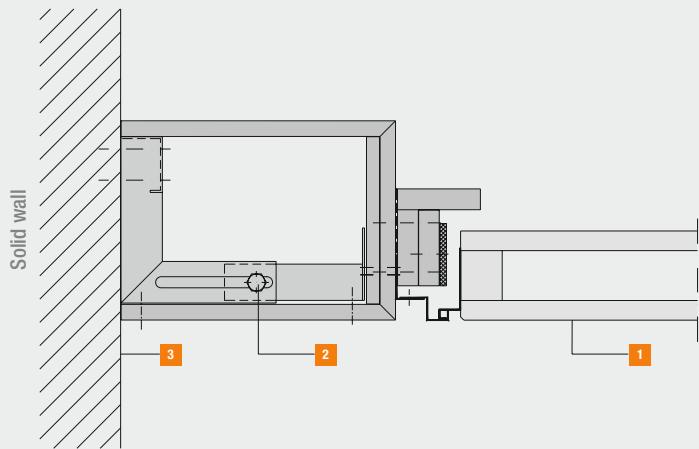

TEST CERTIFICATES

		“Suspended ceiling only“ as per DIN 4102		AMF panels		Test certificate No.

		F30	A2 - s1,d0			

Further test certificates are available from AMF Technical support on request: Tel: +49 (0) 8552 - 422 - 53

HORIZONTAL WALL BRACKET

ANGLED WALL BRACKET

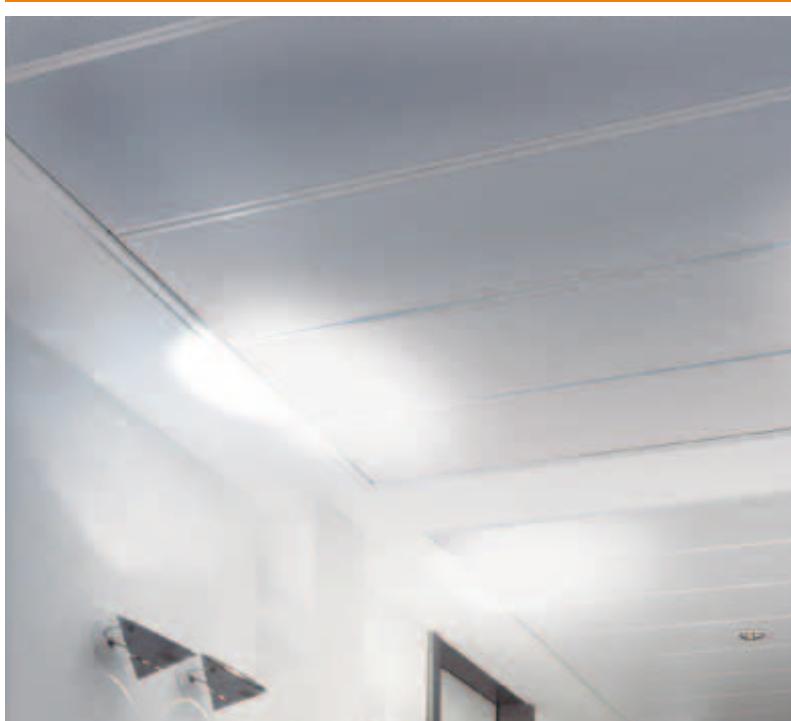

- 1** Fire protection element
- 2** Horizontal wall bracket
- 3** Solid wall

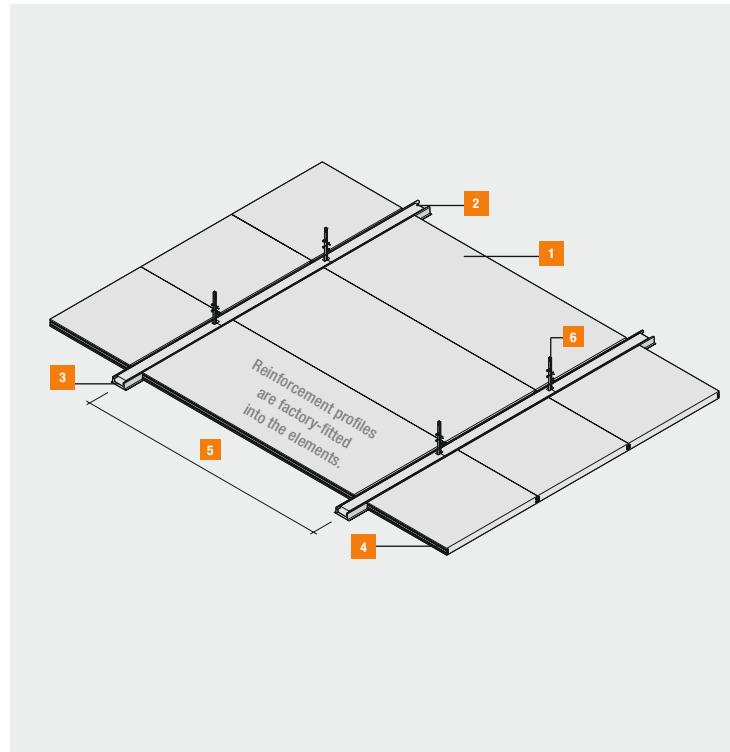

- 1** Fire protection element
- 2** Angled wall bracket
- 3** Bulkhead

Advantages at a Glance

- trouble-free installation with no suspension hangers from the soffit
- adjustable wall bracket for single or twin margin
- reduction in costs thanks to fewer lengths
- paneling with fireboard panels
- horizontal - 16 - 26 cm, 90° adjustment range
- angled - 11 - 18 cm, 45° adjustment range
- fastening to solid wall by means of sets of 2 dowels and screws, e.g. KDM 6 / 80 every 625 mm or less
- fastening to light-weight partitions by means of sets of 2 screws to metal studs 5.5 / 70 mm; max. distance between studs: 625 mm

SYSTEM F30 UNO / +METAL

- 1** 600 x 1400 x 40 mm or 50 mm Uno element for METAL FACE
- 2** 40 mm THERMACOR panel
- 3** 50 or 100 mm bandraster
- 4** Reinforcement profile
- 5** Bandraster at 1482 mm centres
- 6** Nonius hangers every 700 mm

600 x 1400 mm Uno Element

The biggest advantage of System F30 Uno is its fire protection capacity from above and below. When a fire attack occurs from above, i.e. from the ceiling void, the lifesaving escape routes remain free of smoke and heat. When a fire attack occurs from below, the services in the ceiling void are protected.

AVAILABLE FORMATS

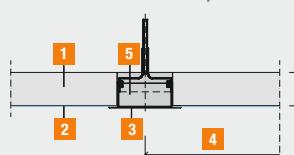

- 1** 600 x 1400 mm
- 2** 300 x 1800 mm, further formats available on request

- 1** 600 x 1400 x 50 mm Uno element
- 2** METAL FACE
- 3** 100 mm bandraster
- 4** Bandraster at 1482 mm centres
- 5** 50 mm THERMACOR panel

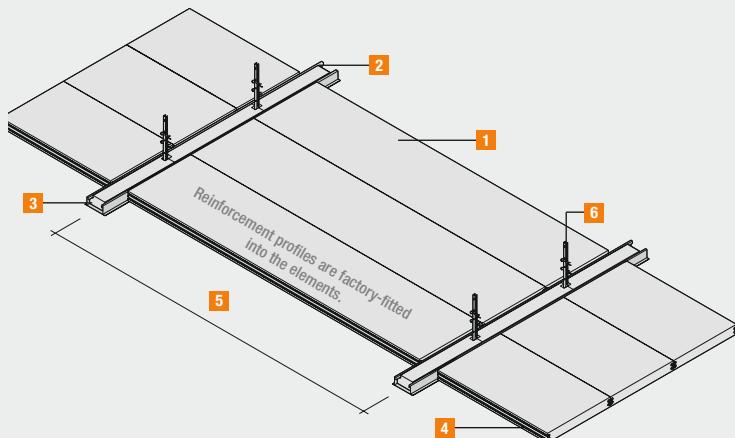

- 1** 600 x 1400 x 40 mm Uno element
- 2** METAL FACE
- 3** Fill 50 mm bandraster with plaster
- 4** Bandraster at 1432 mm centres

- 1** 600 x 1400 x 40 mm Uno element
- 2** 100 mm bandraster
- 3** Bandraster at 1482 mm centres
- 4** 40 mm THERMACOR panel

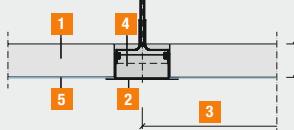

SK: square-edged, VT: recessed, GN: concealed, AW: shiplap. Please observe the test certificates and installation instructions in the Ceiling Systems Catalogue. Further accessories available as per price list!

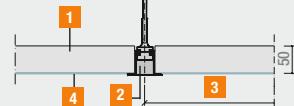

- 1 300 x 1800 x 40 mm Uno element
- 2 40 mm THERMACOR panel
- 3 50 or 100 mm bandraster
- 4 Reinforcement profile
- 5 Bandraster at 1882 mm centres
- 6 Nonius hangers every 700 mm

300 x 1800 mm Uno Element

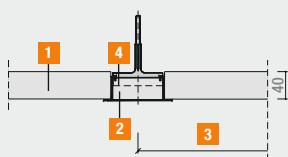

- 1 300 x 1800 x 50 mm Uno element
- 2 100 mm bandraster
- 3 Bandraster at 1882 mm centres
- 4 THERMACOR panel
- 5 METAL FACE

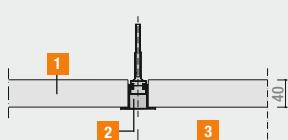

- 1 300 x 1800 x 50 mm Uno element
- 2 Fill 50 mm bandraster with plaster
- 3 Bandraster at 1832 mm centres
- 4 METAL FACE

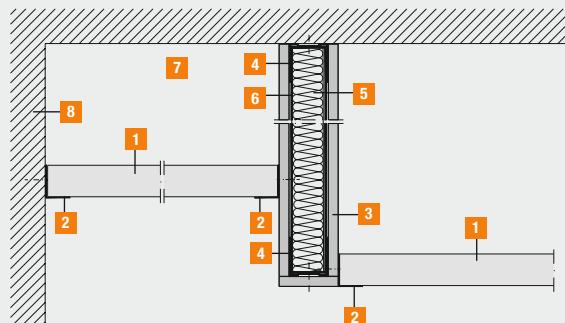

- 1 300 x 1800 x 40 mm Uno element
- 2 100 mm bandraster
- 3 Bandraster at 1882 mm centres
- 4 THERMACOR panel

- 1 300 x 1800 x 40 mm Uno element
- 2 Fill 50 mm bandraster with plaster
- 3 Bandraster at 1832 mm centres

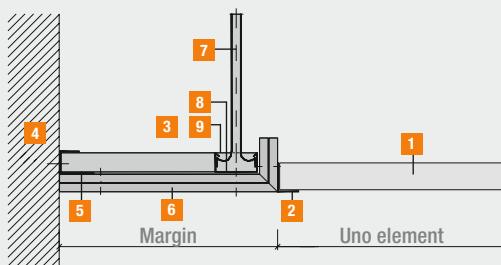

BULKHEAD

- 1 Uno element
- 2 Wall trim
- 3 Plasterboard panel
- 4 U-shaped profile
- 5 Mineral wool
- 6 C-shaped wall stud
- 7 Soffit
- 8 Solid wall or light partition

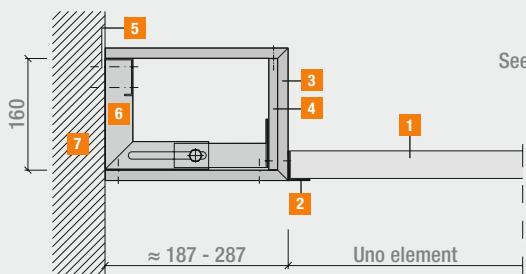

MARGIN

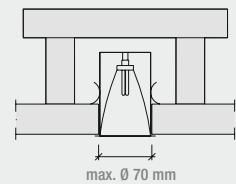

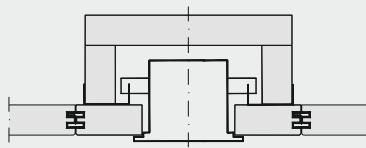

- 1 Uno element
- 2 Wall trim
- 3 C-shaped transverse ceiling profile, separation a=400 mm
- 4 Solid wall or light partition
- 5 U-shaped profile
- 6 Fireboard panel
- 7 Nonius hangers every 585 mm
- 8 C-shaped profile
- 9 Levelling connector

Perimeter detail

WALL BRACKET

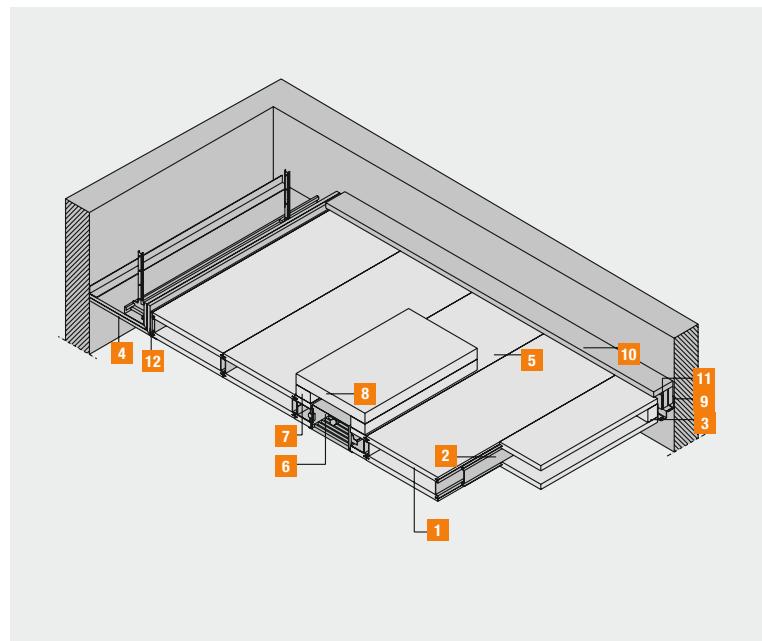

- 1 Uno element
- 2 Wall trim
- 3 15 mm Fireboard
- 4 12.5 mm Fireboard
- 5 Approved fixings according to statical requirements
- 6 Wall bracket
- 7 Solid wall or light partition

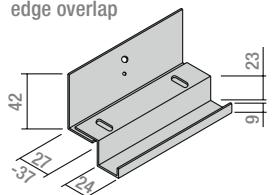

Recessed fittings with fire resistant light boxes for mineral and metal

SYSTEM F30 DUAL +METAL

- 1 Modular elements comprising 39 mm thick mineral panels at top and bottom
- 2 Steel edge profile
- 3 Panel head filler
- 4 Gypsum board margin
- 5 Lighting element
- 6 Flush-mounted light fitting
- 7 Spacer strip (mineral)
- 8 Light box (mineral)
- 9 Adjustable shadow trim
- 10 Fireboard strip
- 11 Wall insulation with intumescent strip
- 12 Wall insulation with mineral wool

SRW AK
adjustable with
edge overlap

Construction

The AMF System F30 Dual fire protection ceiling fulfils all the building component classification requirements as per DIN 4102 and EN 1364-2 both from above, the void, and from below, in the case of room fires. They therefore take into consideration the often neglected fire hazard arising from the presence of materials such as electrical cables, conduits and data cables in the ceiling void, some of which can be highly flammable. This ready-to-install system eliminates time-consuming and costly installation work. Attachment of the modular elements to solid walls or light partitions is fast and trouble-free - even for extra long spans - thanks to shadow trims. Installation options include tested and firesafe integrated lighting systems.

AVAILABLE FORMATS

- 300 x 1200 - 2500 mm, further formats available on request

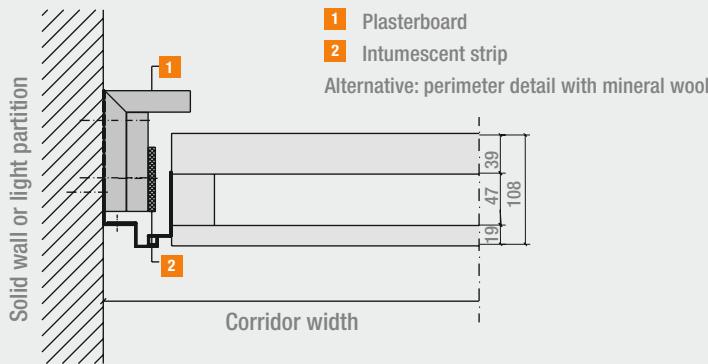

AVAILABLE SURFACE PATTERNS

THERMATEX

- Metal in white similar to RAL 9010, plain
- Metal in white similar to RAL 9010, perforated

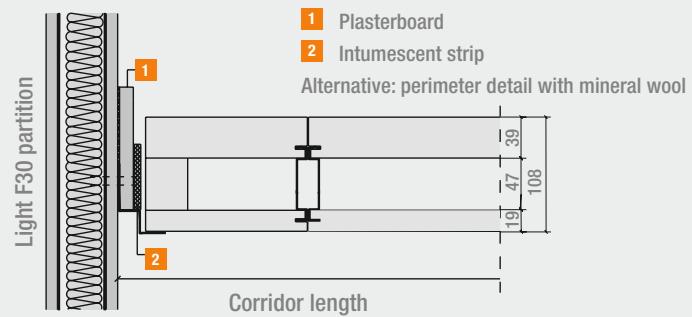

SK: square-edged, VT: recessed, GN: concealed, AW: shiplap. Please observe the test certificates and installation instructions in the Ceiling Systems Catalogue. Further accessories available as per price list!

SWING-DOWN DUAL ELEMENT

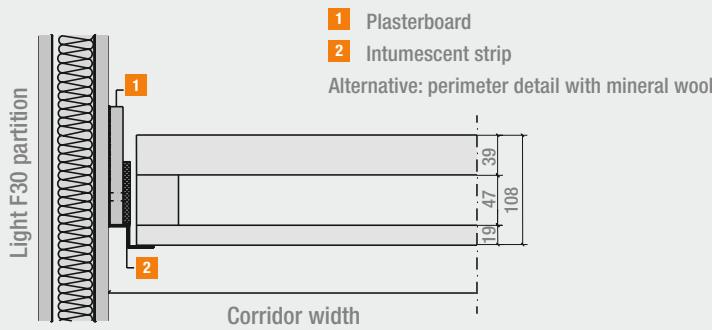

Adjustable shadow trim with material thickness of 2.0 mm on the wall side. Fastening to the solid wall by means of dowels and screws at max. 210 mm intervals.

DEMOUNTABLE DUAL ELEMENT

Wall connection towards the end of the corridor with slimmer modular element widths due to unfavourable ceiling proportions and without compensating margin.

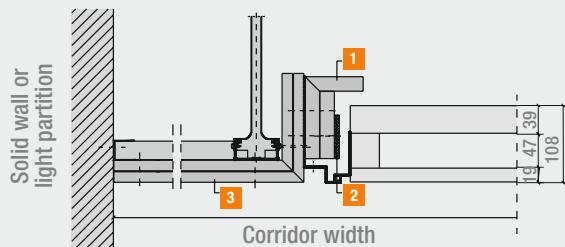

DEMOUNTABLE DUAL ELEMENT

42/20/23/24 mm shadow trim, material thickness 1.5 mm. Fastening to solid walls by means of dowels and screws at max. 210 mm intervals. At light partitions, use sets of 2 drywall screws, e.g. 4.2 x 35 mm, in the region of the studs, $a < 625$ mm.

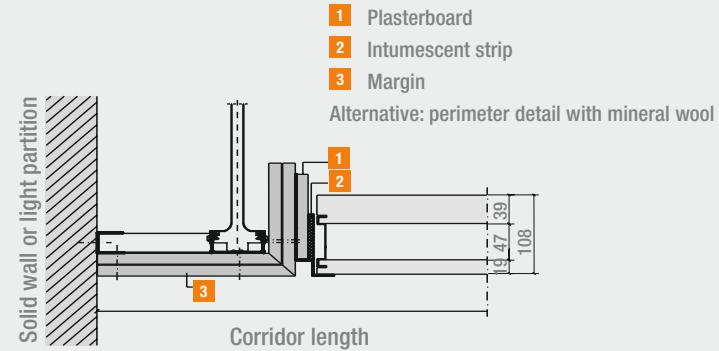

Perimeter detail

SWING-DOWN DUAL ELEMENT

Margin with Nonius hangers

MARGIN

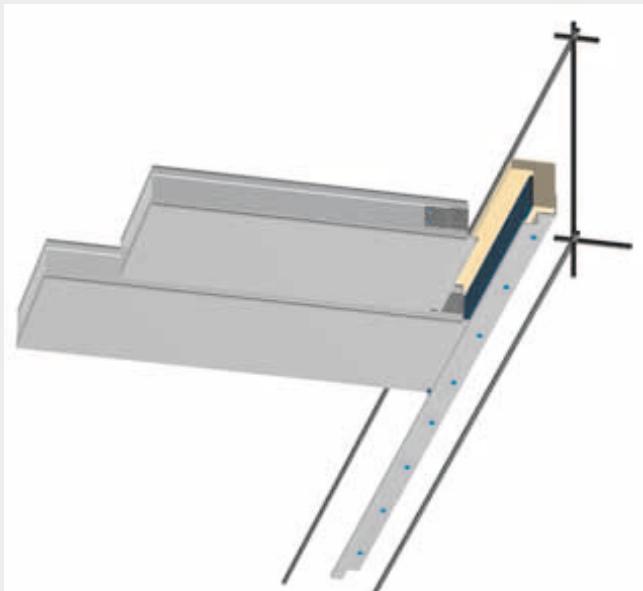

Wall connection towards the end of the corridor with full size modular element widths but with margin construction to compensate for structural variations beyond the AMF module sizes.

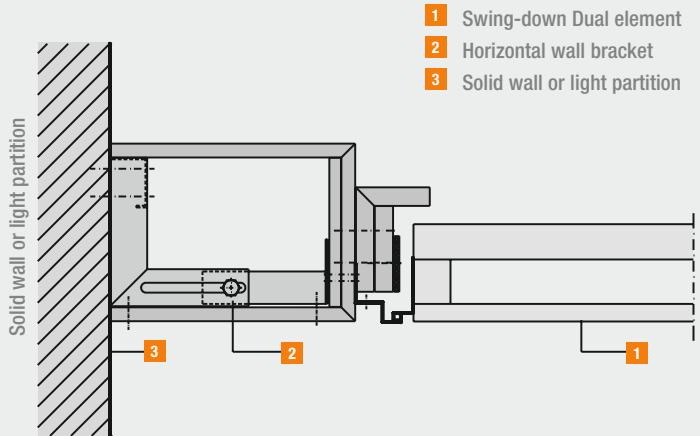

- 1** Plasterboard
 - 2** Intumescent strip
 - 3** Margin
- Alternative: perimeter detail with mineral wool

Further accessories available as per price list!

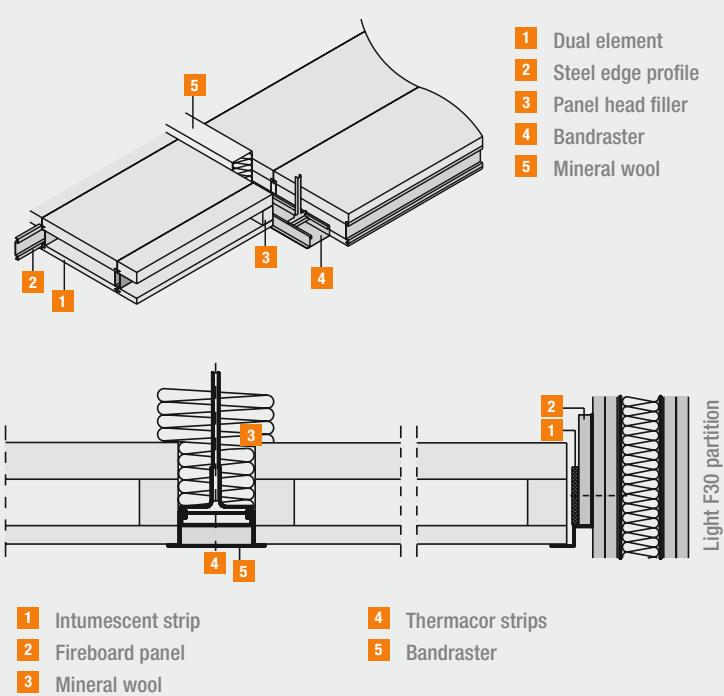

Light partition > F30 (metal stud wall) or solid wall

Parallel Bandraster

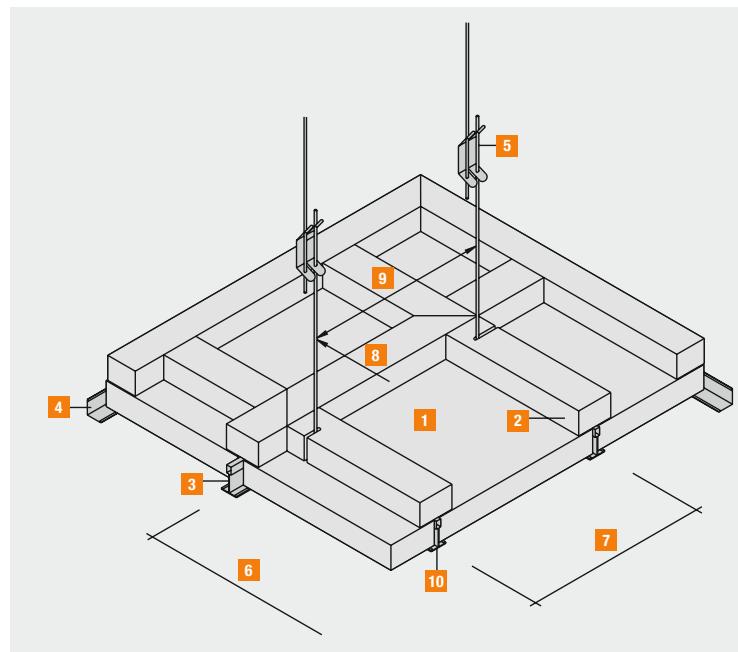

For rooms and corridors with a width greater than 2500 mm it is possible to use a parallel bandraster construction both with solid and light walls.

Bandraster profiles of 50 / 75 / 100 / 125 mm width can be used. In applications such as this the bandraster profiles should be installed with AMF strips and mineral wool.

This construction type also allows trouble-free access to the ceiling void by removal of the AMF module elements. A swing-down construction is also possible using a special bandraster.

SYSTEM F30 MONO

- 1 Mono panel
- 2 Covering strip (factory fitted)
- 3 Cross profile
- 4 Wall trim, 24 x 24 mm
- 5 Quick-assembly suspension hanger
- 6 Max. module dimension, 625 mm
- 7 Max. module dimension, 625 mm
- 8 Suspension spacing, alternating between 750 and 500 mm
- 9 Max. distance between main runners, 625 mm
- 10 Main runner

Construction

The AMF System F30 Mono fire protection ceiling is an independent system that offers optimum safety and economy. This means that in the event of a fire in the ceiling void, the System F30 Mono fire protection ceiling will protect the life-saving escape routes below; conversely - in the event of a fire from below - it will protect the services installed in the ceiling void.

AVAILABLE FORMATS

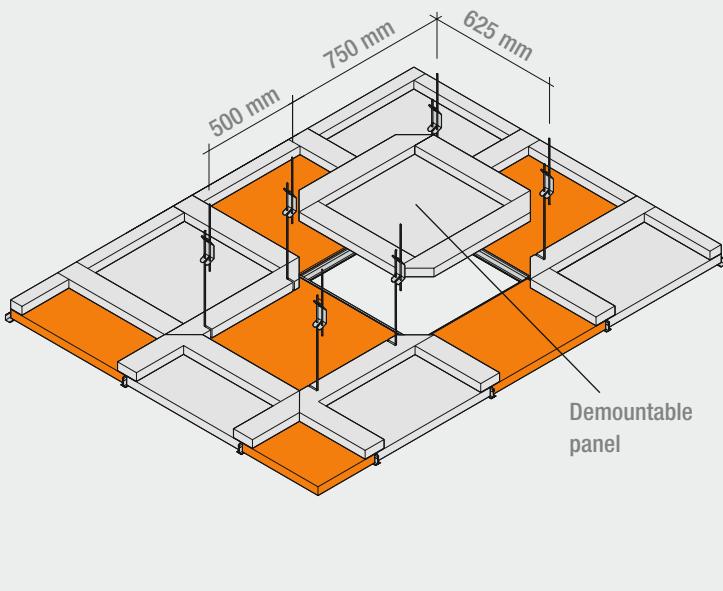

- 600 x 600 / 625 x 625 mm, further formats available on request

AVAILABLE SURFACE PATTERNS

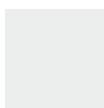

THERMATEX

- Fine Stratos
- Fine Stratos micro perforated

The Construction Products Directive (Council Directive 89/106/EEC), relevant for Suspended Ceilings, was converted to the European Standard EN 13964. It stipulates essential criteria for the CE labelling of ceiling products and ceiling systems.

The RAL- Quality Mark confirms the consistently high quality of the AMF mineral wool, as well as its biological solubility.

Knauf AMF GmbH & Co. KG. is certified according to ISO 9001 and ISO 14001.
