

## Solutions for Indoor Air Quality

### Brush 200/400 mm M12

Item number: 6420281010675

The Lifa Combination brush for edge ducts is primarily intended for rectangular ducts.

Rectangular ducts demand their own type of soft-bristled Lifa combination brush, made of two different types of bristle. The flexible, curled bristles 'whip' dirt free from the corners of the duct and the sides of the spiral-shaped specially crimped bristles make cleaning more efficient. Increasing the rotation speed of the brush also causes the centrifugal force to push the bristles into the corners.

Reversing the rotation direction of the brush can likewise clean the other side of a rectangular duct. The Lifa Combination brush's stiff bristles not only clean but also help keep the brush centralised in the duct.

This brush can also be used in round ducts by, for example, using an oversized brush in relation to the diameter of the duct so that the bristles wipe the dirt off.

The combination brush has a spiral steel core and is attached directly to the Lifa brush machine. The Lifa Pneumatic or Lifa Central Control can be used to centralise brushes.

If the ducts contain very fine dust, static dust, grime, oil or light grease, a Lifa Duct Cleaner can be attached to the front of the brush.

The Lifa Combination brush can be used with all Lifa brush cleaning machines for ventilation ducts.

### Technical specifications

Material	Nylon 1.0 / PP 0.80
Frame and core of the brush	Spiral steel
Attachment to the brush machine	M12, hole for the socket
Cleaning	With a strong base cleaning substance (soak over night and rinse)
