

The perfect swim.

Imagine having the benefits of a large conventional pool in an easy to install mini-version. You can swim gently in place, without turning, or against a swift current and then relax in one of the two jetted hydrotherapy seats.

Hydropool Swim Spas are fun and safe for all ages. Shallow enough for most children and non-swimmers yet deep enough to satisfy the most serious swimmer, jogger or water aerobics enthusiast. All Hydropool swim spas are shipped pre-plumbed and can be easily installed by anyone with basic handyman skills. They can be installed easily into any backyard or solarium. Considerably smaller than conventional pools, the Hydropool swim spa requires less chemicals and maintenance and leaves more room for swing-sets, gazebos or family entertaining.

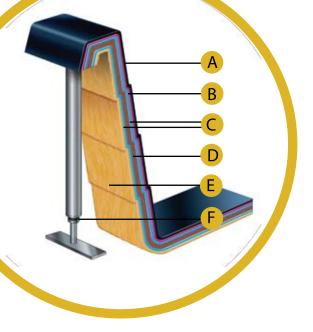

All of the benefits

Hydropool swim spas are coated with a layer of insulating foam and with the optional locking safety hardcover, they cost less to operate and can be enjoyed year round, even outdoors in colder climates. Whether you are swimming, simply enjoying the relaxation of water or playing with the children on a warm day, a Hydropool Aquatrainer or Aquaplay Swim Spa will bring years of enjoyment to the whole family.

Our HydroWise approved swim spas are among the few in the industry that have passed the California Energy Commission's rigorous energy efficiency testing.

- A Durable stain resistant, UV protected .187" cast acrylic surface the most scratch, heat and chemical resistant product available on the market today.
- B 1/8" water proof anti-delamination vinyl ester fibreglass coating.
- 3/8" strengthening polyester fibreglass (2 layers).

The beauty of a Hydropool Swim Spa is that it takes up so little space yet for its size, can transform any environment into a fun and fitness central. It is because of our commitment to customer satisfaction that we have applied as much thinking to hassle-free installation as we have to award-winning design and product innovation.

To this end, we have removed many of the obstacles to the delivery and installation of your Swim Spa to the point where, if so desired, installation can be done by anyone with basic "handyman" skills. Installation is further simplified by the Swim Spa being shipped pre-plumbed as one complete unit, factory plumbed and equipped with filter, pump(s) and heater. The pump(s) and controls are conveniently pre-mounted on a durable composite platform.

It's practically ready to go once you decide where you're going to position it: in-ground, free standing above-ground (with either the optional cedar cabinet or incorporated into your deck) or indoors. Depending on your installation, you can even take it with you if you move.

Install in the ground, above ground

1/2" balsawood stiffening core improves shell strength, durability and longevity.

2lb. water resistant closed cell Polyurethane foam insulation improves energy efficency.

Steel support structure. (Swim spa is self-supporting. Legs simply prevent bowing) **In-ground:** can be partially or fully installed in the ground.

Above-ground: can fit into your new or existing deck or you can take advantage of our beautiful cabinetry add-on.

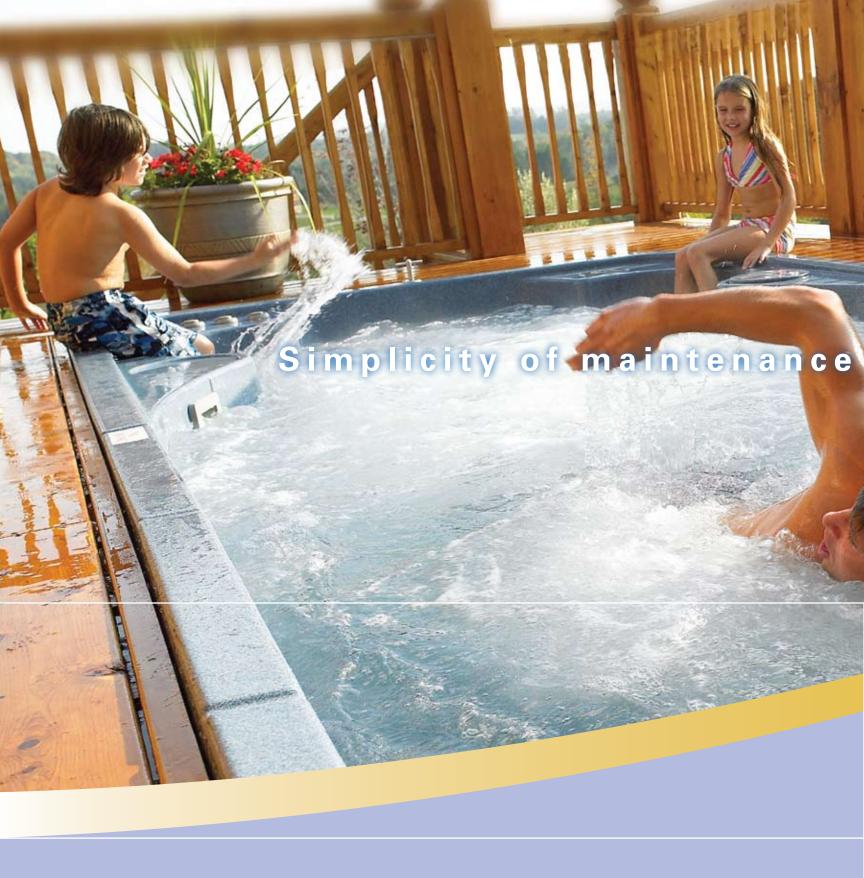

Indoors: perfect for your sunroom, a home addition or basement. Swim or exercise year round and enhance the appearance of your home.

Requires level stable surface capable of supporting 200lbs/sq. ft. (92Kg/Sq.m). Aquatrainers require a 220V, 60 Amp Ground Fault Protected line*. Aquaplays require a 220V, 50 Amp Ground Fault Protected line*.

*European equipment will differ from North American specifications indicated. Please consult your Retailer for details.

All Hydropool Swim Spas are equipped to minimize your maintenance time and efforts

CD Ozonator – Injects natural ozone gas (an active form of oxygen) into your Swim Spa water to oxidize and help eliminate bacteria, reducing your dependency on chemicals for a clean, healthy unit requiring less overall chemical maintenance.

Hydropool's innovative approach to finding better ways to design some of the world's best hot tubs and swim spas has led to our use of a special 2 lb., closed cell insulation, which repels moisture as it retains its insulating values and helps deliver the lowest average operating costs available.

The addition of an optional insulating safety hardcover will maximize energy efficiency by keeping the heat in as you extend your pool season or use the swim spa as a hot tub in the cooler months.

Available in 14' (4.3m) and 17' (5.2m) sizes, Hydropool Swim Spas require a fraction of the care typically required by conventional swimming pools and, as a result, will minimize your maintenance and maximize your time for fun, exercise and relaxation.

Our use of durable construction materials and such innovations as our long-lasting, non-fading acrylic surface never requires refinishing or extra work to keep it looking like new.

two models...

Aquaplay and Aquatrainer

Both the Aquaplay and Aquatrainer are fiberglass reinforced acrylic one-piece mini pools that allow you to swim, jog, and exercise or play in less space, for less money and with less required maintenance than a conventional pool. Both models are available in 14' (4.3m) and 17' (5.2m) versions, the decision as to what unit is best for you and your family should be based solely on your intended use.

Aquaplay or Aquatrainer, unique

Aquaplay the family fun pool

The Aquaplay delivers most of the fun and exercise benefits of the Aquatrainer at a more affordable price.

The shell of the Aquaplay is identical to the Aquatrainer, but the value packed Aquaplay requires only one pump to operate the Hydrotherapy massage seats and uses an Aquacord swim-in-place harness for swimming resistance.

Aquatrainer the swimming treadmill

The Aquatrainer is geared more towards the active swimmer. It has variable resistant, adjustable current stream, thigh/abductor jets for lower body massage and resistance exercises and two multi hydrotherapy massage seats. The Aquatrainer is a pool, hot tub and gym all-in-one.

Whether you choose Aquaplay or Aquatrainer, the benefits of resistance training – exercising in water – are well documented. The Aquatrainer provides all the family-fun features of the Aquaplay, and is also designed for the needs of the serious swimmer.

Aquatrainer is designed around the current created by three powerful yet quiet jet pumps (one 4 HP and two 5 HP each) that create a flat and uplifting force that allows you to swim continuously up to 5 MPH (8 KPH) without turning, as you would in open water. The degree of resistance is fully adjustable so you can choose your own pace.

In addition to this, the Aquatrainer's shape diverts the flow of water to the two massage seats, eliminating the turbulence and backwash effect that can displace the swimmer.

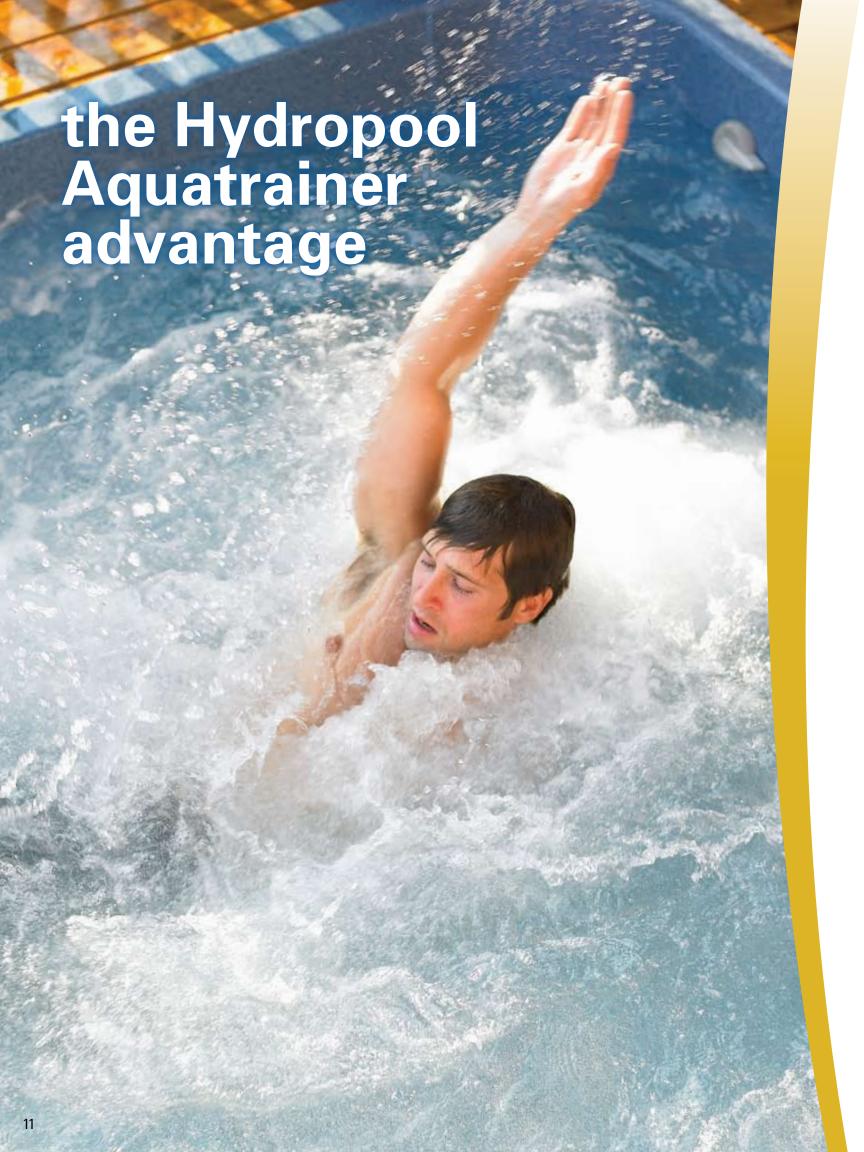

Get into shape, at your

Aquatrainer is also designed to be free of obstructions such as side benches, enabling the swimmer to take advantage of maximum arm and leg room. This is also useful for providing proper access and room to caregivers or therapists providing rehabilitative programs.

Swimming offers a low-impact solution to improved cardiovascular health and the intensity of your workout is a dial away. The convenience of having your own Aquatrainer or Aquaplay facility in your own home is ideal for those who are regularly required to properly build up endurance and conditioning.

Follow your workout with a soothing massage in the hot tub style seats and you'll know that you've found the perfect solution to your needs for a healthier lifestyle. It doesn't get any more practical than Hydropool and your own "water gym" in the privacy of your own home.

The Perfect Swim

Hopefully by now you are convinced to purchase a swim spa instead of a conventional pool. Now let's focus on why a Hydropool Swim Spa is, in our opinion, the very best swim spa available. First we start with the look... clean symmetrical lines, euro design... no obstructing benches, no protruding equipment, no large grates or vinyl liners which can be found on other makes of swim spas. Five exciting colours of acrylic that will not fade, discolour or require replacement in ten years as other surfaces, especially liners quite often do. Thick, strong shells constructed with the same materials the worlds leading boat manufacturers' use.

The adjustable steel support legs prevent the shell from bowing and eliminates the need for on-site bracing support or backfilling. All the pumps, heater and controls are pre-mounted on a weather resistant composite base, rubber cushioned to prevent vibration and to reduce noise. Integrated state of the art electronic equipment eliminates the breakdowns associated with some other systems and allows your swim spa to operate on a single line 60 amp system, requiring significantly less amps and power lines than most other systems.

The Swim Spa arrives at your door totally pre-plumbed, requiring only quick on-site connections that can be completed by anyone with even basic handyman skills in a matter of hours. Entry and exit is safe and easy with a Hydropool Swim Spa. Unlike other makes that have small narrow steps or ladders, your Hydropool Swim Spa is equipped with wide, deep steps that can also double as a rest or child's play area.

Hydropool Swim Spas feature two ergonomically designed semi-recumbent massage therapy seats, each equipped with four or eight powerful hydrotherapy jets. The design is identical to the seats found in Hydropool's award winning hot tub models. Most other swim spas either do not have any massage jets or they are placed in areas not necessarily suited for comfortable relaxation. Relax, unwind and stretch out before and after your swim. Adjust the diverter valve to select a gentle, medium or invigorating jet action.

Enjoy relaxing in the massage therapy seats while your children, spouse or other loved ones swim or play. The Hydropool Swim Spa's unique barrier free design allows multiple people to enjoy the swim spa at once.

The wide-mouth skimmer removes all dirt, hair and floating debris. The easy-access top-load filter eliminates the need to crawl under the swim spa in order to access the filter as with most other makes of swim spas.

But most important of all, Hydropool Swim Spa's provide, in our opinion, the best swim on the market.

Our unique wide stream swim nozzles project a non-turbulant water current that is both more enjoyable to swim in, but also results in a wider current making it easier to swim in and less likely for you the swimmer to swim wide of the current and get out of sync.

allow you to adjust the flow by simply turning the flow diverters from a gentle current to a powerful stream allowing the strongest swimmer to swim consistently up to 5 miles (8 km) per hour without turning

Our tank design eliminates the backwash

effect by diverting the water flow to the massage seat area, eliminating the effect that can impede a smooth swim. Many competitive swimmers find the Hydropool Aquatrainer to have the most realistic swim.

Great looks, design, performance and a warranty backed by a leader in the pool/spa industry are certainly solid reasons for choosing Hydropool... but we sincerely believe the most important reason is the fact that only Hydropool Aquatrainer delivers "The Perfect Swim".

Aquaplay the family fun pool

Relax, play

STANDARD AQUATRAINER FEATURES:

Each 14' (4.3m) and 17' (5.2m) Aquatrainer is pre-equipped with a Standard Comprehensive Package that includes:

- Four Stage Acrylic Polymer & Balsawood Shell
- Generous Swimming Area & Superior Tank design
- Ergonomic Bucket Seating
- Stainless Steel Versa Massage
 Hydrotherapy System x 16 (8 per Seat)
- Insulated Swim Spa Shell
- Automatic Water Purification Ready (Ozone)
- Lower Side Wall Suctions
- High Flow Surface Skimmer with Strainer Basket
- Pressure Side 75 sq ft High Performance Filter
- Silent Air Control x 3
- Automatic Chemical Feeder
- Steel Support Package
- Floating Insulating Cover
- · Aquacord Swim Tether
- Premium 20 LED Lighting X 2
- Electronic Soft Touch Controls
- Patented Swim Jets with Flow Control Nozzle
- Adjustable Thigh Jets
- Equipment Package Includes:
 1 Dual Speed 4 HP Pump,
 2 Single Speed 5 HP Pumps,
 5.5 KW Electric Heater,
 Isolation Valves and a Programmable
 Filtration Timer

UPGRADES / OPTIONS:

- Premium Acrylic Color
- Hydropool Surround Sound with Subwoofer & Remote Control
- Knockdown Furniture Grade Cabinet With Steps
- Tapered Safety Insulating
 Two Section Bi-Fold
 Hardcover (ASTM Approved) Grey Only
- Hydropool Safety Roll Up Cover
- Alternative Equipment Re-location
- Premium 20 LED Lighting x 2
- Automatic Water Purifier (Ozone)
- Salt Water Bromine System
- 33" Stainless Steel Hand Rail
- 36" Stainless Steel Hand Rail60" Wall Mount Exercise Bar
- Auxiliary Heater By-Pass Loop

Great Aquaplay & Aquatrainer Options

Alpine Mist

1) Standard Acrylic Colors*

Your Hydropool Aquaplay and Aquatrainer come available in three exciting color choices or you can choose to upgrade to a premium color for a small additional charge.

2) Hydropool Surround Sound With Subwoofer & Remote

Hydropool's Surround Sound includes a waterproof AM/FM/CD Player with an MP3 input and proprietary circuits that automatically prevent distortion at high volumes. With 180 watts total power, a custom EQ optimizes sound and automatically adjusts the various frequencies. The system comes complete with a floating waterproof remote control and an engineered subwoofer that rounds out the sound by delivering deep distortion-free bass. The remote also controls swim spa functions including up to three pumps, bubbler and lighting options for the ultimate in convenience.

Premium Acrylic Colors*

All Hydropool Swim Spas are manufactured using only the finest cross link acrylic that delivers the ultimate in beauty and durability.

For the discerning buyer that wishes the newest in acrylic technology, Hydropool offers certain marble, gemstone and pearlesence acrylics for a nominal charge. It is like ordering a premium paint package with your new car.

3) Knockdown Furniture Grade Cabinet With Steps

Above ground installations enjoy the option of our 5/8" clear, kiln-dried western cedar cabinet with matching steps. This package offers sheer beauty and hardy protection from the elements as well as full service-friendly access to all working parts thanks to its sectional design.

4) Tapered Safety Insulating Two Section Bi Fold Hardcover

Hydropool's Safety Insulating Hardcover is made from durable marine grade vinyl which, when in it's closed position, completely seals the top of the swim spa for improved energy efficiency. The hardcover also includes locks that keep the cover tightly closed to keep unwanted children and pets out of the swim spa for improved safety and security. Please note that the hardcover for the 17' model is a three section cover.

Hydropool Safety Roll Up Cover System

The Safety Roll Up Cover System is the best way to safeguard friends and family and protect your investment, ensuring your pool will remain the source of fun and enjoyment it was intended to be. The Safety Roll Up Cover System automatically opens and closes with the touch of a button and looks great whether on or off of the swim spa. The same system is available in a more economical manually activated system.

*Hot tubs colours may not be exactly as shown due to printing.

Hydropool Swim Spas can be custom ordered to meet nearly every installation challenge. In most cases, Hydropool can customize your personal Hydropool Swim Spa plumbing in order to accommodate a variety of installation requirements. Simply submit a diagram of the installation and Hydropool will work with you to determine what will be needed. Hydropool will then custom manufacture the swim spa to meet your specific needs.

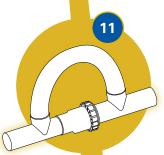

10) Wall Mount Exercise Bar

The Wall Mount Exercise Bar is 60" wide and can be mounted within the interior of the swim spa and is intended to act as a stabilizing bar for stretching and various other activities. Alternatively, the Wall Mount Exercise Bar can be installed on nearby walls for safety and flexibility exercises.

6) Premium LED Lighting X 2

Enhance your swim spa experience by adding two extra 20 LED lights for a total of four.

11) Auxiliary Heater By-Pass Loop

Where the installation calls for an additional auxiliary heater, Hydropool Swim Spas can be manufactured with special plumbing that will easily and reliably allow for the addition of the heater. The Auxiliary Heater By-Pass Loop includes all of the required plumbing including a check valve for performance and safety.

7) Automatic Water Purification (Ozone)

When mixed with water, ozone is a highly effective oxidizer that assists in removing unwanted contaminants from the swim spa water. Hydropool Swim Spas can be ordered with an ozone injection system that injects ozone in the water and dramatically improves the performance of the system. The injected ozone significantly reduces the amount of chemicals required to sanitize the swim spa water.

12) 60 Amp GFCI With Subpanel

In order to ensure that bathers are fully protected while using their swim spa, a ground fault circuit interrupter (GFCI) must be installed. For your customer's convenience, provide them with a matching GFCI breaker that conveniently installs into the included custom subpanel.

8) Salt Water Bromine System

Hydropool's advanced Salt Water Bromine Generator provides unsurpassed ease and convenience in swim spa water sanitation. The system results in automatic crystal clean water allowing your filter and water balancing products to do their job without adding chlorine or bromine. The Salt Water System reduces the amount of work required to maintain your swim spa.

13) Extended Swim Spa Vacuum

The Extended Swim Spa Vacuum makes it easy to remove unwanted dirt and debris that has settled to the bottom of the swim spa. Simply submerge the vacuum head to the bottom of the swim spa, pump the handle and the dirt and debris is automatically drawn into the vacuum and trapped in a cleanable and replaceable stainless steel filter.

9 Stainless Steel Hand Rail

A Stainless Steel Hand Rail is available in either a 33" or 36" version and can be installed using an inset concrete flange. Alternatively, a bolt down deck mounted flange can be used for wood deck applications. The Stainless Steel Hand Rail is ideal for added safety while entering and exiting the swim spa.

14) Swim Spa Monitor

Monitor the health of your swim spa from inside your home with Hydropool's Swim Spa Monitor. Designed for in-home use, the Swim Spa Monitor is a wireless hot tub control that is attractive and easy to use. It shows water temperature and diagnostic messages on the backlit LCD display and lets you adjust the water temperature, turn on/off the jets, turn on/off lights, and personalize programming between standard, economy and sleep modes. The Swim Spa Monitor is available on all Hydropool Swim Spas and is a great gift or add on item.

What exactly are Hydropool Swim Spas and how do they work?

Hydropool Swim Spa are pre-plumbed and factory assembled mini pools. Commonly referred to as swim spas, they are manufactured from fiberglass reinforced acrylic and are available in two sizes: 14' x 7.75' and 17' x 7.75'. There are two models: the Aquaplay and the Aquatrainer. To swim in the Aquaplay you use the supplied Aquacord which conveniently holds you in place while you swim or exercise. The Aquatrainer model is equipped with three jet pumps and is for serious swimming or exercising.

Can I Install My Swim Spa in the Ground?

Your Hydropool Swim Spa Pool can be installed in-ground, above-ground or half and half. It must sit on a compact level base capable of supporting 200 lbs. per sq. ft (92.5Kg). The equipment can be submerged or above-ground, but not more than 20 ft. of pipe length from the swim jets. Where the equipment is installed above the water level, the optional remote equipment package will be required.

Can I Use My Swim Spa Pool Outdoors Year-Round?

The Hydropool Swim Spa is designed to handle very cold weather and the swim spa temperature can get as high as 104°F (40°C). If you live in a northern climate, you will be able to enjoy it in the coldest conditions. In extreme northern climates, some owners will shut their outdoor units down in late November and reopen them again in March or April. The operating season is still double that of a conventional pool, and is easier to use in inclement weather. Utilizing the optional safety insulating hardcover is quick, easy, and prevents debris from landing in the pool. The automatic chemical feeder and optional ozonator will keep the water soft, sparkling clean, and bacteria-free.

Can I Convert My Swim Spa to a Hot Tub?

It is possible to heat the water temperature from traditional swimming temperature of 78–85°F (26–29°C) up to hot tub temperatures of 100–104°F (38–40°C), –an optional electric heater or gas heater will be required on an Aquaplay.

However, this process will take several hours. At the same time, the pool is so well insulated it will take a few days to cool back down to swimming/water-aerobics temperature. If you desire a heated hot tub on a regular basis, consider a separate hot tub purchase. The pool comes standard with multiple massage jets at the seated end that delivers a relaxing massage. We manufacture a full line of hot tubs suitable to all budgets.

We also believe that the seating comfort and hydrotherapy benefits of these combo units are not as effective or as enjoyable to use when compared to our stand-alone units. A stand-alone hot tub provides excellent hydrotherapy as it offers more potential to create a maximized design.

Is a Fence Required?

We recommend that you check with your local building/bylaw department for any restrictions or requirements. Since the pool is available with a locking safety hardcover that prevents young children from entering and, taking into account that there is less than 4' of water depth, some municipalities may not require a fence.

We've not only thought of every

Why are Swim Spas becoming so popular?

Hydropool Swim Spas deliver swimming, exercising and hydrotherapy benefits all-in-one. Since the water volume is only one tenth of a typical pool, cleaning, heating and maintenance becomes a nominal task, at a fraction of the cost. When installed outdoors, they take up less yard space and, when placed indoors, they require less construction and vapor control expense than a typical pool. Another key reason for the growing popularity of Hydropool Swim Spas is, however, the fact that you can swim to your heart's content without having to stop and turn every few strokes.

Who handles installation and service?

Hydropool Swim Spas are sold on a direct basis from our manufacturing facilities or through a member of our worldwide retailer network. Your pool will arrive via a common carrier or on the truck of our local dealer. You will require a crane, forklift or at least 10 able-bodied men to move the unit off the truck and into the desired location. Since our pools are recognized as the easiest to service and most cost-efficient to maintain, you will be delighted at how quickly your pool will be ready for use.

Can I Install My Hydropool Swim Spa Indoors?

If you have the available space or are planning a renovation or an addition, a Hydropool Swim Spa Pool installation can be quite spectacular. Unlike a large pool, it is much less expensive to install and requires less humidity control. The Swim Spa requires as little as 8' x14' or 8' x 17' of floor space plus a 3' x 8' area for the equipment. A service access area of at least 2.5' should be left on all sides.

With good ventilation from a small exhaust fan, a dehumidifier, or windows that open, you will be able to remove the moisture and keep the room totally comfortable without impacting sensitive entertainment equipment. Our optional, safety hardcover is designed to reduce heat loss and minimize evaporation as well as keeping the pool locked and safe for children and pets.

Is Heating With Gas Necessary?

The two Aquatrainer and Aquaplay models are equipped with an electric heater. Due to the thick 2 lb. closed cell foam insulation and the optional insulating safety cover, it is not absolutely necessary to convert to gas – even if you live in a very cold climate. The cost of operating the pool in the coldest months is very economical.

What Maintenance is Required?

Like any pool, the Hydropool Swim Spa will require the addition of chemicals to kill bacteria and to balance ph and alkalinity. A Hydropool contains about 1/10 of the water found in an average pool and, correspondingly, requires less chemicals. Hydropool employs an inline automatic brominator with a 75 sq. ft. cartridge filter to simplify the water care process. In addition, we recommend an ozonator to further reduce chemical requirements while making the water soft and gentle to the skin. In an outdoor setting, use of the hardcover will keep airborne debris from entering the water as it maintains temperatures and reduces moisture loss. This eliminates the need to vacuum the pool bottom regularly.

Operating Costs?

Indoors, your Hydropool Swim Spa, when equipped with the 5.5 kW electric heater, will operate for well less than \$100/month in most regions of North America. Outdoors, when located in colder regions, the costs will be similar for the warmer six to eight months but will increase in the colder winter months.

There's no better product endorsement than from the customers who own a Hydropool swim spa of their own. Nobody says it better.

Whether your interest in a Hydropool Swim Spa is based on family fun or personal fitness, rehabilitation or enhancing your entertainment options, Aquaplay and Aquatrainer deliver an aesthetic beauty, functional versatility and superior investment opportunity like no other product. Our customers know this better than anybody and are the first to tell you. But their best advice would be to tell you that the best way to get your feet wet in the "swim spa" category is by first determining your needs and studying your purchase alternatives. Confidence has taught us that all roads lead back to Hydropool.

"Our organization chose to provide the Hydropool Swim Spa line to our instructors and customers/patients because of the barrier-free design and the integrity of the Hydropool organization."

but our track record speaks for itself.

"Both my wife and I suffer from chronic arthritis and I have Juvenile diabetes. After 6 months of constant swimming against the jets, my joints have loosened considerably. My wife does her exercises in the water, which helps prevent her from overstressing her knees. We are believers in this pool."

- C. Talbot, Nevada

"The Aquatrainer is delightful in many ways. It is an amazing feeling to be swimming, floating, exercising in the warm pool water while watching the snow fall outside...it is fantastic, no matter what the season. We just love it. Best of all, maintenance is so easy, actually...there is very little. Yeah!"

- J. Carlon, New York

"Hydropool was my first contact.
Their honesty and genuine concern for my interest quickly led me to believe that I was dealing with a reputable company that stands behind its product. With the quality product and service I have received from Hydropool, it was worth every penny I spent."

- P. Bosseler, Arizona

"The Hydropool Swim Spa fit perfectly into our small backyard and has provided my family with all the benefits of a larger pool

- M. Zalewski Burlington, Ontario

"Above and beyond great exercise...
we now enjoy times in the swim spa
with friends and family"

P. LesevreParis. France

Reasons Why More and More People Are Choosing Hydropool Swim Spas Over Conventional Pools.

Flexibility & Practicality Whether it is Aquaplay or Aquatrainer, you will enjoy the best of all worlds for fun and fitness. Hydropool Swim Spas are the pool "you didn't think you could afford" or "the pool you didn't think you had room for" – our products will exceed your expectations while providing the best solution to your needs.

Ease of Ownership Not only can you self-install a Hydropool Swim Spa but maintenance is simplified and minimized due to its size and resulting requirements. Whether located indoors or out, you have more time to get into the swim of things.

Safety From kids to seniors to special needs applications, Hydropool Swim Spas offer a smart, safe alternative to conventional pools, given responsible supervision. At only 4 foot deep and always 'an arm reach away', our Swim Spas provide peace-of-mind for novice swimmers and those requiring special attention. Optional handrails and other available enhancements provide additional levels of safety and satisfaction. They also have wide, safe entry/exist stairs.

Energy Efficiency Hydropool's multi-layer insulation process with our energy-efficient components and our optional thick, energy-conserving hardcover keeps operating costs to a minimum all year-round. Being smaller than a conventional pool, our Swim Spas require less chemicals, less energy to operate and keep heated and less maintenance—saving you time and energy as well.

Maximization of Space Indoors or out – there is no better use of space for your recreational needs. Your 'private water gym' requires a nominal amount of room, maximizes your investment and appreciation of your property as it enhances the space you have.

Performance Hydropool provides top quality components and service-friendly features for maximum enjoyment. For example, Aquatrainer's swim current is the deepest and widest available thanks to individually-controlled "Wide Stream Hydroflow Swim Nozzles" for maximum resistance and absolute control.

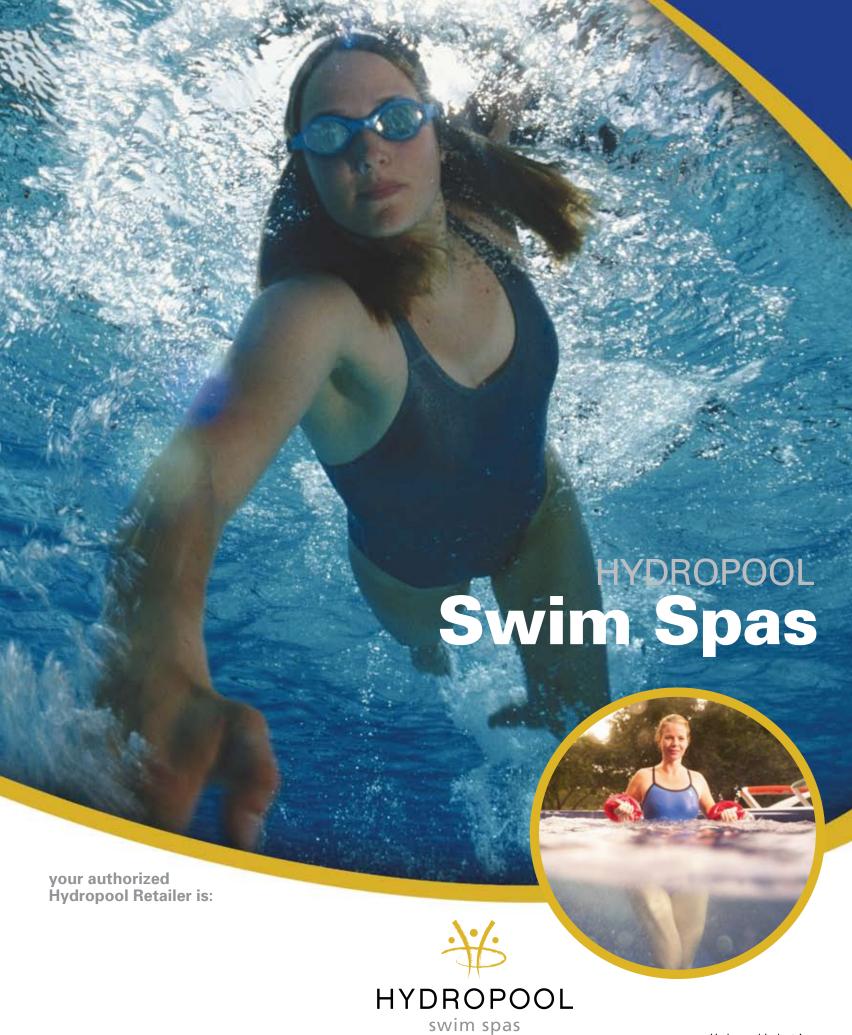

Tank Design Hydropool Swim Spas provide superior functionality: each model provides an optimum swimming area devoid of obstructions and turbulence.

State-of-the-Art Electronics Allows you to safely and easily control all aspects of your Swim Spa experience (while in your pool or out) and allows you to pre-program heat and filter cycles to optimize non-peak electrical hours.

Warranty We stand behind the quality of our products with straight forward, no-nonsense protection on full parts and labor that will ensure expense-free ownership for years. Get a full ten years on the structure, a full five years on the surface finish and a full three years parts and labor.
