“A good reputation must be earned”.

(August Hörmann)

In keeping with the tradition started by the company's founder, the name Hörmann delivers brand name quality with extensive expertise. The family business has over 75 years of experience as a construction component specialist and sees itself as your partner from the very beginning of building and renovation projects. No surprise then, that Hörmann is one of Europe's most successful entrance door providers. All of this gives you a good feeling when you purchase a Hörmann entrance door.

Made in Germany

All entrance door components are developed and produced in-house at Hörmann. The in-house profile system and style panels, which are also designed and produced in-house, ensure that you receive an optimally matched, individual entrance door. Our highly qualified employees work intensively on new products, continual further developments and improvements to details. Patents and unique products on the market are the result of this. Quality you can depend on: tests under real conditions ensure mature series products with the reliable Hörmann quality.

Certified brand quality

CE mark in accordance to EN 14351-1

The CE mark confirms compliance with and observance of the principal requirements of the EC directives according to EN 14351-1 for all of our entrance doors.

Quality assurance system according to DIN EN 9001

Hörmann entrance door production is DIN EN 9001 certified. This is another proof of Hörmann's motto “Quality without compromise”.

Long-lasting. Guaranteed.

We are convinced of our products and our uncompromised quality assurance. That is why we issue a 10-year guarantee* on all Hörmann entrance doors.

A home should be beautiful, warm and safe

Hörmann entrance doors offer you all that

Choose from 3 different versions to create an individual look and enjoy the advantages of aluminium entrance doors compared to plastic and timber doors: aluminium entrance doors have a high acoustic and thermal insulation, provide a high level of security and do not require follow-up painting. The new versions are explained in detail on the following pages. All variants are of the highest quality, "Made in Germany".

Your advantage: Thermal insulation

All Hörmann aluminium entrance doors have high thermal insulation by means of their aluminium profile systems with thermal breaks and thus comply with the current energy savings regulation. This is confirmed by the low U values that we include individually with the order confirmation for every door. For all entrance door versions you can optionally order the thermal insulation package with additional PU foam filling in the frame. TopPrestigePlus doors are distinguished by the highest thermal insulation and are especially suited for fitting into **energy-efficient houses**. See page 10 for more information.

Your advantage: WK 2 security equipment

Hörmann entrance doors are now even more secure: with the WK 2 optional security equipment available at a surcharge. All entrance doors, transom lights and side elements from Hörmann provide this tested security.

Your advantage: Preferred colours

All Hörmann entrance doors are available in **11 equally-priced preferred colours**. More information on this can be found on page 41.

Your advantage: side elements and transom lights

To increase the brightness of your entrance area, all doors are available with side elements and transom lights. For many door styles you can also choose design glass side elements that were especially created to match the door style.

Your advantage: exclusivity

Many of the entrance door styles introduced in this catalogue are available from Hörmann only. These styles are marked "Only from Hörmann".

TopComfort entrance doors

The inexpensive standard version

TopComfort doors offer you equal degrees of design and functionality – the all-round profiles are precisely connected and mitred at the edges, creating a harmonic frame around the styled infill, which is precisely framed by the leaf profile (1). The view of the interior shows the door infill with rounded beads and the trim with a discreet grey seal (2).

Good thermal insulation

The 80-mm-thick profile system with thermal break and the 30-mm-thick infill ensure good thermal insulation. Depending on the style, we offer you

TopComfort entrance doors with

a U-value of up to $1.4 \text{ W}/(\text{m}^2\text{K})$. This allows you to save heating costs and enjoy a comfortable atmosphere at home.

Double thermal insulation glazing

Even with entrance door styles featuring large glazed areas you do not have to fear excessive energy loss. This is because the standard thermal insulation glazing offers you a compelling U_g -value as low as $1.1 \text{ W}/(\text{m}^2\text{K})$.

Optimally fitted

The beautifully designed three-way hinges allow the TopComfort entrance door to be variably adjusted. This way, your entrance door is optimally sealed and falls smoothly and securely into its lock.

TopComfort with three-way adjustable hinges. Optionally available with concealed hinges (see page 10).

Section view of TopComfort

TopPrestige entrance doors

The elegant leaf-overlapping version

External view

Viewed from inside

In the TopPrestige version, the infill design is mounted onto the leaf profile, thus appearing generous and elegant when viewed from the outside (1). Inside, it has a pleasing slim leaf profile without strips and without a visible seal (2).

External view

Viewed from inside

High thermal insulation

The glued composite construction of leaf and style infill of the TopPrestige versions offers you an entrance door with very high thermal insulation. Its thermal break profile system and the PU-foamed infill ensure that barely any heat escapes to the outside. Depending on the style, we offer you TopPrestige entrance doors with a U-value as low as $1.4 \text{ W}/(\text{m}^2 \cdot \text{K})$.

Double thermal insulation glazing

With the TopPrestige entrance doors with large glazed areas, we offer you a version with the highest thermal insulation ratings. They give you the benefit of thermal insulation glazing as standard with a U_g value of up to $1.1 \text{ W}/(\text{m}^2 \cdot \text{K})$.

Created for comfort

The beautifully designed three-way hinges allow the TopPrestige entrance door to be variably adjusted. This way, you can always rely on the fact that your entrance door is optimally sealed and falls smoothly and securely into its lock.

Section view of TopPrestige

TopPrestige with three-way adjustable hinges. Optionally available with concealed hinges (see page 10).

TopPrestigePlus entrance doors

For additional thermal insulation and design

*The premium entrance door:
best thermal insulation
and design*

TopPrestigePlus entrance doors offer you comfort at the highest level. This is because TopPrestigePlus versions are distinguished by an infill that overlaps the leaf on the outside (1) and inside (2). The flush-fitting interior door view is particularly well matched to your interior doors.

Benefit from thermal insulation that sets new standards.

TopPrestigePlus entrance doors feature an 80 mm thick profile system with thermal break and a 70 mm thick insulated style infill. With thermal insulation values of up to $1.1 \text{ W}/(\text{m}^2\cdot\text{K})$, they are especially suited for fitting into energy-efficient houses.

For your additional comfort: triple thermal insulation glazing

Enjoy triple glazing with a U_g -value of up to $0.7 \text{ W}/(\text{m}^2\cdot\text{K})$. Minimising heat losses saves energy and money.

Concealed hinges as standard

The hinges are concealed in the TopPrestigePlus version, i.e. they cannot be seen from the inside or outside – an elegant solution for your home. Since this hinge construction makes forced opening more difficult, the security bolt is omitted on the hinge side. The door leafs can be simply and easily adjusted. This way, you can close your entrance door comfortably and securely at all times.

External view

Viewed from inside

Concealed hinges as standard in TopPrestigePlus entrance doors. Opening angle 110°

Frame profiles

In addition to the standard frame profile, you can optionally choose from two decorative fascia frame versions

Frame profile Standard 70

The standard frame profile constitutes an almost flush surface with the door infill. On request, this is also available in a width of 110 mm e.g. for a more convenient and beautiful connection to the full thermal insulation or for fitting behind the opening.

Frame profile Standard 110

Fascia frame Rondo 70

The rounded frame profile adds a stylish touch to your entrance door, providing it with a particularly harmonious look with its rounded edges. The fascia frame Rondo 70 is available as standard with the entrance doors in Decograin Golden Oak.

Fascia frame Caro 70

This version has an attractive and distinguished look that upgrades the appearance of your door through the added depth appearance of the frame. For the door styles with Design handles this type of profile underlines the flush fit of the handle and the frame. We recommend using the Caro 70 fascia frame only in combination with the security package H-5 Comfort Scan, Plus or Code, to open the door easily.

Better to play it safe

Hörmann entrance doors are an excellent choice
up to the most minute detail

Only from Hörmann

Standard 5-point automatic lock

5-point automatic lock with automatic locking as standard

The H-5 automatic lock is a mechanical, self-locking multiple lock. The lock engages as soon as the entrance door is pushed into the latch. When locking, 3 steel hooks with 2 additional bolts pivot into the stainless steel lock plates to automatically lock the door. This self-lock function can be switched off. To open the door, either use the lever handle or open it with a key.

Further options: child safety / holiday function, where the door is double locked with the key. The lever handle does not function anymore, so the lock can no longer be opened with it.

Variably adjustable: Hörmann electric door strikes (optional)

The electric door strike works when the door isn't locked and the automatic self-locking is switched off. The electric strike releases the door following an electrical impulse (door intercom). By actuating the electric strike's day / night lever and at the same time switching off the H-5 automatic lock, the entrance door can be opened by a slight push from the outside.

2

Switch lever

to optionally switch off the automatic self-locking function. This makes it possible to open the door using a Hörmann electric door strike.

Solid security bolt

A stainless steel bolt engages during locking with the fascia frame. This way, it protects the door on the hinge side from being leveraged or pushed in. The security bolt is omitted with concealed hinges (standard feature with TopPrestigePlus) since this hinge construction makes forced opening more difficult.

Solid security bolt

Threshold with thermal break

Extremely robust, 80 mm thick and offering thermal insulation – the entrance door threshold with thermal break and concealed bolting to the bottom. In EV1 silver coloured.

Threshold with thermal break

Aluminium lever handle Rondo

Stainless steel lever handle Caro

Stainless steel lever handle Okto

Security rose escutcheon in white

Profile cylinder with keys

Knob cylinder

Beautifully shaped interior lever

As standard, all doors are equipped with the interior lever Rondo, stove-enamelled in white. Optionally, it is also available in stainless steel or your choice of RAL as well as the versions Caro or Okto, also in stainless steel.

Beautifully shaped security rose escutcheon

These protect the profile cylinder from being drilled open and twisted off. Available as standard in Traffic white RAL 9016 or in stainless steel for the surface finishes Decograin Golden Oak, doors in preferred colours and RAL to choose.

Secure profile cylinder

With emergency and hazard function, i.e. the door lock can still be operated when the key is inserted on the inside in accordance with DIN 1030 / DIN 18252. As standard with 5 reversible keys.

Optional thumb turn cylinder for closing the door conveniently from inside without a key.

After exact on-site measurement, your Hörmann specialist dealer will offer expert advice in choosing the perfect overall look from these entrance door styles.

Perfectly matched: Entrance door styles and sectional garage doors, M or L-ribbed

The large Hörmann matching programme provides you with aligned entrance door and garage door ribbing options for a matching appearance. The result: No optical offset from the base line. You will see: The beauty of your home is reflected in these small but crucial details.

TopPrestige entrance doors:
Style 875 TP
Style 895 TP
Style 898 TP

Sectional garage doors, L-ribbed:
with a door height of 2000 mm
with a door height of 2125 mm
with a door height of 2250 mm

TopPrestige entrance doors:
Style 825 TP
Style 845 TP
Style 855 TP

Sectional garage doors, M-ribbed:
with a door height of 2000 mm
with a door height of 2125 mm
with a door height of 2250 mm

Entrance door infill cross-section

Sectional garage door cross-section

Matched entrance and garage doors

The cross-section of the entrance door and garage doors clearly shows the ribbed look is a result of the grooves in the infill. In the garage door, it comes from the ribbing of the individual sections or the section transitions.

Quick and clean within a single day Entrance door modernisation: Professional and competent

Removal

The renovation of an entrance door is a routine task for Hörmann professionals, which they can handle quickly and cleanly on a single day. The measurement at your home and the selection of the new door is soon followed by the modernisation process. Step 1: Your old door is professionally and cleanly dismantled and disposed of in an environmentally-friendly manner.

Fitting

Step 2: The new Hörmann entrance door is fitted by the authorised Hörmann partner according to the measurements. The special entrance door threshold neatly covers up the transitions from the interior to the exterior. The threshold is fixed to the ground by concealed screws.

Adjustment

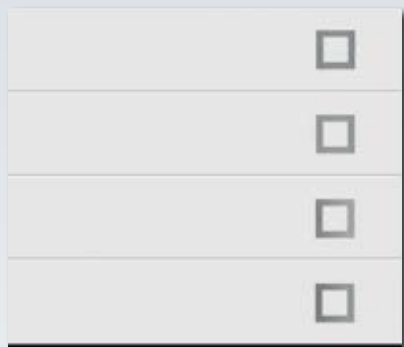

Step 3: The Hörmann fitter precisely adjusts the entrance door during fitting allowing you to enjoy your new door for a long time. This ensures the optimal functioning of your Hörmann entrance door right from the start.

The Hörmann Design programme

Garage door and entrance door combined harmoniously
with glass and stainless steel elements

RAL 7016 Anthracite grey, matt

RAL 7015 Slate grey, matt

RAL 6009 Fir green, matt

RAL 6005 Moss green, matt

RAL 3003 Ruby red, matt

You have a free choice of colours for your new Hörmann entrance door. Match the door to the exterior facade of your home or use a contrasting colour. Select one of equally-priced preferred colours or any RAL colour. You can also select the interior side of your new entrance door. Ask your specialised Hörmann dealer about delivery times and price of the style and colour of your choice.

Select one of 11 equally-priced preferred colours for a surcharge

Colour coating on both sides

All Hörmann entrance doors in standard Traffic white RAL 9016 are powder-coated on the inside and outside. Entrance doors in 11 preferred colours are powder-coated on the outside. (Inside in Traffic white RAL 9016, high gloss as standard). On request, entrance doors can be colour-coated on both sides, even in different colours.

Colour in line with your individual wishes

Besides our 11 equally-priced preferred colours, you can also choose an entrance door in any of the RAL colours (signal and pearl-effect colours on request). Pick the colour that best fits your home!

Shades matching Hörmann garage doors

Each entrance door also has a Hörmann garage door in a matching shade. For more information, ask your Hörmann specialist dealer.

Dark colours should be avoided if the aluminium entrance door is exposed to the sun, as a possible deformation of the leaf may impair door function and leaktightness.

Securing excellent properties

Highest protection matched with convenient operation

You can equip your door with intelligent technology for increased comfort and security beyond the standard security equipment. Hörmann offers you the latest options ranging from mechanical locking with the S-3 S security package to electronic locking with the S-5 Comfort package and convenient access control using fingerprints. Consult your Hörmann partner for more information about these options.

TIP:

The S-5-Automatic / comfort locks have been tested and certified by the VDS (German Property Insurance Association). This means that the self-locking doors are considered locked / bolted in case of a break-in, maintaining your claims towards your property insurance.

Graduated increased security

Hörmann offers you various security packages providing graduated additional security and comfort.

Secure opening with an integrated steel bar:

The **S-3 S** security package features 2 bolts and a steel bar integrated in the lock. It allows you to open the door only slightly so that strangers are unable to push the door open completely. This security package is also available with an automatic lock (**S-5 S Automatic**) which mechanically locks your entrance door when it is pulled shut (with 4 bolts).

Automatic locking – convenient opening:

The **S-5 Comfort** security packages feature an automatic lock that secures the door with 5 hook bolts when pulled shut. When opening via one of the control element options (internal push button, hand transmitter, etc.), an integrated motor releases the lock and the door can be easily opened. Of course you can continue to unlock the door with a key.

❶ Push button opening:

With **S-5 Comfort**, your entrance door can be opened at the push of a button from the inside, e.g. via the house intercom. This is especially suited for blocks of flats.

❷ By entering a code:

With **H-5 Comfort Code**, you open your door from the outside by entering a code. The elegant code switch CTV 1 / CTV 3 with one or three functions is especially robust and protected against vandalism.

❸ Via finger print:

S-5 Comfort Scan opens your door with a finger scanner. You and your family will no longer need a key. Up to 100 fingerprints can be learned on the scanner, simply and without a computer. By the way, you can also equip your Hörmann garage door with this technology.

H-5 Comfort Scan with EC-Turn

Unlocks your entrance door and opens the door using an operator. This package is especially suitable for barrier-free home entrances.

A variety of glazing options

Based on your personal preferences

Ornament Micrograin

Each glass type has a different look depending on colour, structure and finish. In addition to the glass types we suggested in the catalogue images, you may choose from any other glass type according to your own personal preference and wish for your new Hörmann entrance door. You will find an overview of the most popular glass types here. Your specialised Hörmann dealer can provide you with prices and delivery times.
