# chapoo

# Working together just got easier

## Document & data exchange, control and approval.

Chapoo unites people with different roles in projects. Communicate, manage documents, assign tasks and automate processes. Manage live data in the cloud with forms and reports — anytime, anywhere.
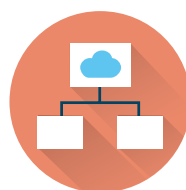

## Documents

Share documents with project collaborators. They can view the full document, create revisions or annotations and notify others of those.
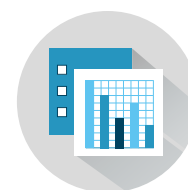

## Users & Roles

Define who gets to see what documents. Create roles for the different types of participants to the project and manage the access rights for each role.

## Workflows

Design with ease workflow processes with an intuitive drag-and-drop graphical workflow editor and generate automatically required tasks.

## Forms & Reports

Build forms and tables with simple drag-and-drop wizards. Define reports and automatically generate them on regular intervals.

## Project administration

Projects administrators set up folder structures, define users, roles and access rights and generally manage the day-to-day operations of the project platform.

## View all documents in seconds

The Chapoo viewer supports 70+ document types, from text to image to office formats, as well as CAD formats. View, zoom or rotate a document. Plus the viewer allows you to print the documents and add annotations to any part of them.

## Document management

CAD drawings, schedules, contracts or reports are easily uploaded through drag-and-drop and shared with project collaborators.

Contributor

## Project collaboration

Projects are easy to set up and can include project specific document folder structures, email, discussion forum, calendar and more.

## Graphical workflow

Workflow processes can automatically generate required tasks for specific individuals or groups of users.

## Role-based access control

Instead of managing access for hundreds of project participants individually, create roles for the different types of participants to the project. Then manage the access rights for each role in a straightforward overview table.

## Forms and reports

Forms can be built with simple drag-and-drop wizards. Project members can also define reports and use workflow to automatically generate them.

## Waalkoppel project

**Total value**
€ 317.000.000

**Project value**
€ 200.000.000

**Project usage**
32.000 documents

"We weighed ease of use, performance and costs.
Most important to us were the document codification, the auto
workflows and a receptive partner."

- R.J. van den Noort - Bouwproces Specialist, Mobilis B.V.

**The consortium assigned to the construction of the Waal bridge in the Netherlands selected the cloud-based Chapoo service to enable smooth project collaboration across the project's life cycle.**

Waalkoppel is a temporary association of three enterprises: Mobilis (part of TBI Infra), construction company Van Gelder and Dywidag International. In the design phase of the project some 80 to 100 people were actively involved. As organizing contractor Waalkoppel also used a large number of suppliers and – just for the bridge - seven major sub-contractors.

"We always found the Chapoo team to be a receptive partner. When an issue arose we quickly could submit it together with our suggestions for improvement... for this we were often in contact with the service desk in Ghent, also through Skype calls... all of which resulted in updates that further improved the ease of use of the solution."
