

Installation

Sentry recommends mechanical installation, using fasteners through the included fastener grommets. The specific type of fastener will depend on the substrate to which the Corner Sentry will be attached. Corner Sentry can also be installed on square posts by use of a 2"/50mm wide strap using the included belt recesses.

Users have reported using construction adhesives to attach the product to corners; if this type of installation is preferred Sentry HIGHLY recommends discussing this with an adhesives expert regarding the use of adhesives on a polyethylene product and the particular substrate to which it will be attached.
