

# Hörmann Industrial Door SPM

Optimum for Loading Technology

# Sturdy double-skinned steel door

Top door design and certified security

## Good thermal insulation

Building doors must not only be extremely sturdy, they must also have good thermal insulation characteristics. Hörmann's SPM door is a proven sectional door made of steel sections that optimally fulfils these requirements. Thanks to a combination of steel and PU rigid foam, the door leaf is both robust and insulating.

For more information, please refer to our additional brochure.

# Door design options

Grey white (RAL 9002)  
with Section glazing

42 mm

## Colour

The outside and inside of the door is Stucco-textured in Grey white (RAL 9002). The Stucco texture makes the surface resilient to dirt and small scratches.

## Glazings

Section windows made of scratch resistant DURATEC synthetic glazing allow for a permanently clear view and additional light in the building.

## The door sections

The door sections are filled with polyurethane rigid foam. This 42-mm-thick insulating core provides for the convincing robustness and thermal insulation.

## Finger trap protection

The unique form of the door sections eliminates trap points, both on the outside and inside. That is valid also for the hinges.

## Intermediate seal

Prevents Dust sand dirt from outside and keeps airconditioned inside.

## Shaft operator WA 400 – Strong and robust

This patented flange version is simple and quick to fit to the spring shaft and requires considerably less sideroom than the direct drive solutions from other manufacturers.

## Optimally sealed

The high-quality seals are permanent elastic and weather-proof. At the ground a bottom profile seal protects against dirt and rain.

**Track application N**  
Normal track application

**Track application H**  
High-lift track application

**Track application V**  
Vertical track application

For more information, please refer to our additional brochure for further door options.
