■ PRODUCT LINE

Interior doors

Established in 1992 Intermetal Ltd. a member of Harwal Group Technologies an international investment and management company that specializes in various manufacturing industries. From inception Intermetal Ltd. has been manufacturing products for the continuously growing construction industry in the Middle East. The most recent addition to our range of products is the VERDA Doors. Suitable for commercial and residential properties, the VERDA Door collection is manufactured in standard as well as custom sizes and is available in an array of colors.

Dedicated to manufacturing quality interior doors, our combination of experience and technology assures a product that can be specified with confidence.

Our working philosophy involves us to partner with each customer to provide solutions to meet exacting needs. By combining superior manufacturing processes

VERDA DOORS by Intermetal Ltd.

Intermetal is known as a reputable, innovative company that manufactures quality doors. Using the latest technological advancements, the Verda Doors are the specified choice amongst consultants, contractors, architects and designers due to their performance and durability.

Each of the collection has its own distinctive style but what remains the same is:

Value: Affordable pricing.

Variety: A comprehensive range of door panel styles.

Quality: We guarantee long lasting, high performance, durable doors.

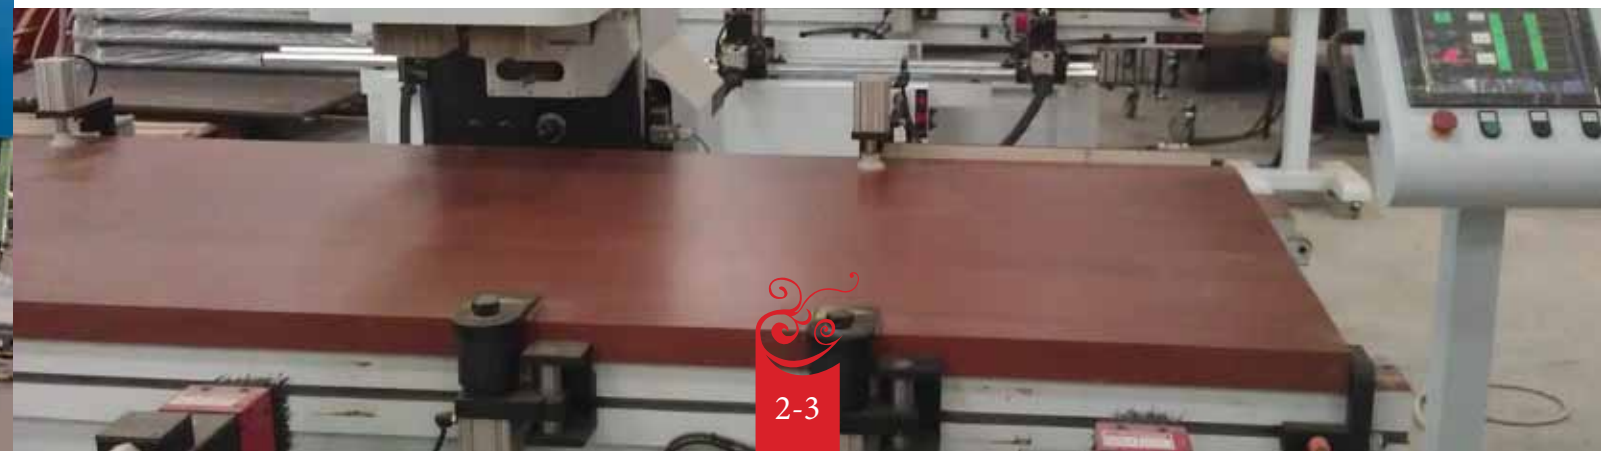

Innovation. An in-house design & development team work with sales to create products that the market requires.

The Verda Door panels are manufactured using softwood and solid core, semi-solid core or honeycomb core. The panel bars are bonded along the length on the "mini-spike", thus alleviating the deformation of any component. The wide selection of doors offered has been achieved by combining natural and synthetic materials and using different textured surfaces.

Each door is fitted with stylish door accessories and the door frames, architraves and extensions work with a telescopic connection system that enables easy and quick installation.

We endeavor to consistently manufacture quality internal doors that will definitely add value and style to any property.

For the production of the interior doors Intermetal uses solid cores, semi-solid cores and honeycomb cores that are available in PVC, MDF and in a Veneer Finish. The solid and semi solid cores are manufactured by mixing wood particles or flakes with a resin and forming the mix into a sheet. The honeycomb is a building and packing material, and one of the most common uses of paper honeycomb is for interior doors.

The collection is suitable for any room, however, we recommend using only the PVC Doors in the bathroom as they are water resistant.

Flat doors

Flat Door with solid core

Flat door with semi-solid core

Flat door with honeycomb core

These doors are simple and reliable and resistant to deformation. Available in a wide color spectrum this collection will satisfy even the most exacting of tastes.

For door orders consisting of over 100 pieces, custom designs are readily accepted.
