INSPIRATIONS

We consider ourselves to be a provider of complete ceiling solutions for building applications where safety, efficiency and design are combined in modern functional ceilings.

The product program is structured in special ranges:

- Classic ceiling designs and contemporary system solutions
- Fire protection ceilings with integrated safety
- The THERMATEX Acoustic Range combines sound absorption, reflection and attenuation in one ceiling
- Health and hygiene ceiling systems for especially sensitive applications
- Sound, light & E-tech integrates lighting and media technology intelligently into the ceiling providing more functionality
- Alternative designs to the classic mineral ceilings program in mineral, metal and wood can be found in the Material & Design range

We are permanently developing our competence making us a technological leader in multi-functional ceiling systems. In order to optimise our services to market our products internationally, we have a world-wide sales organisation and advice network through which we reach our customers. Currently, we sell in 90 countries world-wide with 30 sales subsidiaries and representatives in the major markets.

Our world-wide, constant high level of quality is the result of our quality and sustainability activities at our central production location in the heart of the Bavarian Forest. At the same time we are also committed to strict compliance with environmental standards for products and production.

For our products, we only use natural raw materials that have been tested nationally and internationally and meet the highest safety and environmental requirements.

We have proven this with certification according to DIN EN ISO 14001. AMF ceilings fulfil all demands for healthy living, for which our products have received the environmental label 'The Blue Angel'.

For us, the ceiling is more than the physical, vertical limit.

It is an integral part of the interior and plays an important role in creating a pleasant atmosphere.

Many of our projects have shown that the ceiling can combine functionality and aesthetics perfectly.

Depending on the application, we offer innovative solutions that fulfil the important requirements of fire protection, acoustics, sound protection and hygiene.

Be inspired by a wealth of new ideas and designs!

EDUCATION

ST. AIDAN'S ACADEMY - DARLINGTON, GREAT BRITAIN

THERMATEX dB Acoustic, SK, System C

THERMATEX Alpha Panels, SK, System I

THERMATEX Alpha black, SK, System C

Architect: Planning by Balfour Beatty
