Knauf Metal Profiles and Accessories

New: Precision-engineered metal profiles and accessories for complete drywall systems
Knauf Metal Profiles

Knauf metal profiles are precision-engineered, high-quality steel sections that are used to form the metal substructure of the Knauf Drywall Systems. All metal sections produced from high-grade hot dip galvanized steel coils with the cold-rolled forming process in Knauf R.A.K. FZE factory located in the Emirate of Ras Al Khaimah, UAE.

The main design criteria’s for Knauf metal sections are:

- **Quality**: Knauf only works with ISO 9001 certified raw material suppliers to guarantee its steel quality. High grade hot dip galvanized zinc coating (min. Z140 class) provides maximum protection against corrosion.
- **Rigidity**: Knauf profiles produced from sturdy 0.6 mm thick galvanized steel can meet the statical requirement of the most demanding projects.
- **Simplicity**: Minimum amount of accessories and ‘twist to fit’ studs and channels are designed to make the installer’s job as simple as possible.
- **Compatibility**: Knauf metal sections are specially designed to work and perform together with Knauf gypsum boards and accessories to create complete, tested and certified systems.
- **Variety**: A wide range of sizes and options allows designers to find solutions that exactly match their requirements.
Knauf Metal Profiles Raw Material Specification

Steel

Quality Classification: DX51D+Z140 as per EN 1037:2004
Yield Strength: 295 Mpa
Tensile Strength: 345 Mpa
Elongation in 80mm: 25%
Hardness (HRB): 64

Protection

Method: Hot Dip Galvanization
Quality: 98% Zinc (Zn)
Coating Classification: Z140 as per EN10327
Coating Thickness: 140gr/m² both sides
                  10µm single side
Coating Finish: Normal Spangle (N)
Surface Quality: As-coated surface (A)
Surface Treatment: Chemical Passivation (CA)

*Z140 is the standard coating thickness for Knauf Drywall Systems profiles. Higher coating thicknesses are available upon request. Contact Knauf Drywall Systems sales team for availability and delivery times.

Steel Character
Knauf Metal Sections and Their Application Areas

Partitions

**Knauf CW + and CW Studs**
C shaped profiles friction fit at equal distances into the head and base UW channels to form the vertical metal stud frame.

**Knauf UW Tracks**
U-shaped profiles used for forming the floor and ceiling perimeter frame in drywall partitions.

**Knauf Deep Flange UW Tracks**
U-Shaped profiles used to ceiling perimeter frame where high deflection tolerance is required.

Wall Linings / Furrings

**Knauf CD 60/27 and CD50/27 Channels**
C-shaped channels used for vertical framing in Knauf W623 Wall Lining Systems.

**Knauf UD 28/27 Channels**
U-Shaped channels used for perimeter framing for Knauf W623 wall lining systems.
Knauf Metal Sections and Their Application Areas

**Shaftwalls**

- **Knauf J Track**
  J-shaped channels used to form the perimeter frame

- **Knauf C-T Studs**
  C-T shaped heavy duty steel sections used to form the vertical frame

**Ceilings**

- **Knauf Main Channel**
  Galvanized lightweight steel section to be used as main channels for conventional drywall ceiling systems

- **Knauf Hat Furring Channel**
  Galvanized lightweight steel sections to be used as furring channels for conventional drywall ceiling and wall lining systems.

- **Knauf L Angle Channel**
  Galvanized lightweight steel section to be used as perimeter framing for conventional drywall ceiling systems

- **Knauf CD 60/27 and CD80/27 Channels**
  C-shaped channels used for main/upper and furring/lower channel in Knauf Ceiling Systems

- **Knauf UD 28/27 Channels**
  U-shaped channels used for perimeter framing for Knauf D11 Ceiling systems
10 facts about Knauf CW+ Studs and CD Channels

1. **0.6mm metal thickness for sections that are robust, strong and durable**

2. **Deep dotted flanges allow easy catching of screws and faster screwing times**

3. **Central indentation allows easy alignment of gypsum board joints**

4. **44 mm long flanges allow faster board alignment and joint treatment for higher wall height performance even with 600mm spacing (provides 37 % more surface than standard C-studs)**

5. **Asymmetric flanges heights allow easy boxing of studs**

6. **H-shaped slots allow easy installation of MEP cabling**

7. **50 mm web part allows much easier board alignment, screwing and joint treatment (provides 42% more space than standard hat furring channels)**

8. **Triple indentation enhances the rigidity of the channel**

9. **Special lip design increases the load capacity of the system and provides a better locking mechanism for suspension accessories**

10. **A multifunctional design allows the same channel to be used both for wall linings and ceilings**
How to Identify a Knauf Metal Section On-Site

Example use of Knauf metal profiles in partitions
As part of its “complete drywall system” approach, Knauf also provides a full set of accessories specifically designed to be used with Knauf metal sections to construct the metal substructure for certified drywall systems. All of the accessories are produced from high grade steel with Z200 coating as per to EN 10327.

**Knauf Ankerfix**

Anchor type suspender for attaching hanger wires to Knauf CD channels. Designed exclusively to be used with Knauf D11 Ceiling System. *(Load bearing capacity class = 25 kg.)*

**Knauf Hanger Wire**

Galvanized 4.0 mm thick steel wires used as suspenders for Knauf D11 Ceiling System. Knauf hanger wires are fixed to the basic ceiling with the help of ceiling dowels and are connected to the metal grid with the help of Knauf Ankerfix. Recommended for suspension heights up to 2.00m. *(Load bearing capacity class = 25 kg.)*
Accessories

**Nonius Suspension System**

Alternative heavy duty suspension system to be used with Knauf CD channels. The system consists of 3 parts:

<table>
<thead>
<tr>
<th><strong>Nonius Hanger Top</strong></th>
<th><strong>Nonius Pin</strong></th>
<th><strong>Nonius Stirrup</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Fixed to structural slab. Available in various lengths up to 5.00m.</td>
<td>Middle part of the system which is sued to attach the Nonius Hanger Top to Nonius Stirrup.</td>
<td>Bottom part of the system which is attached to CD channels. Available for CD 50/27 and CD 60/27 channels.</td>
</tr>
</tbody>
</table>

Recommended for suspension heights up to 5.00 m *(Load Bearing Capacity of System= 40 kg.)*
**Accessories**

**Universal Bracket**

Accessory used as adjustable brackets for Knauf W623 Wall Lining System or as suspenders for Knauf D11 Ceiling System. Attaches to Knauf CD Channels with LN 3,5 screws. Can be cut and bend according to the suspension height. Designed exclusively to be used with Knauf D11 Ceiling System and W623 Wall Lining System. *(Load bearing capacity class = 40 kg.)*

**Multiconnector**

Galvanized connector piece used for extending Knauf CD Channels in cases of long spanned ceilings. Designed exclusively to be used with Knauf D11 Ceiling System and W623 Wall Lining System.

**Clips**

Galvanized clips to connect the main/primary CD channels to the lower/furring CD channels forming the Knauf D112 ceiling grid. Designed exclusively to be used with Knauf D112 Ceiling System.
Accessories

Universal Connector

Galvanized accessories to connect Knauf CD Channels at intersection points in the Knauf D113 System grid. 2 Universal Connectors per intersection point.

Example use of Knauf metal profiles and accessories in ceiling applications
Knauf CW+ Studs

Knauf CW+ Studs are specially engineered steel sections for fast-track and high-quality drywall constructions. They are specifically designed for Knauf W11 Partition and W62 Wall Lining Systems. The combination of their sturdy 0.6 mm metal thickness and 44 mm flanges allows the partitions to have the highest possible wall heights with minimum consumption of studs, making the partitions both economic and stable. Knauf CW+ Studs are ideal for high-end commercial, residential, hospital and hotel projects. All CW+ Studs comply with EN14195.

For more information on wall heights / fire protection / sound ratings please refer to W11 Technical Datasheet.

**Features:**

- ✓ Sturdy 0.6 mm steel section
- ✓ 44 mm long flanges provide faster installation times and increased maximum wall heights
- ✓ Deep dotted flanges allow faster screwing times and enhance stiffness of the sections
- ✓ Knauf logo embossed at the web part allows easy identification on-site
- ✓ Asymmetrical flanges allow easy boxing of studs when necessary
- ✓ Readymade slots through the web allows easy electrical cabling and piping through partition cavity

(2): Z140 is the standard retail zinc coating thickness sufficient for interior drywall applications. Higher zinc coated stud production also possible. For customized zinc coating requirements please contact Knauf LLC sales Team
Knauf CW Studs

Knauf CW Studs are galvanized lightweight steel sections to be used as vertical stud framing for drywall partitions and wall linings. All CW Studs comply with EN14195.

Features:

 ✓ Asymmetrical flanges allow easy boxing of studs when necessary
 ✓ Readymade slots through the web for pipe electrical cabling

Knauf UW Tracks

Knauf UW Channels are galvanized lightweight steel sections fixed to structural ceilings and slabs to form the metal framing perimeter for Knauf W11 Partitions and Knauf W623 Wall Lining Systems. All UW Tracks comply with EN14195.

Knauf CD Channels are galvanized lightweight steel sections to be used as primary/main and secondary/furring channels for Knauf Ceiling Systems and also as furring channels for Knauf W623 Wall Lining Systems. Their increased web width allows faster and easier installation and smoother joints. All CD Channels comply with EN14195.

### Features:

- Sturdy 0.6 mm sections with full set of compatible accessories
- Part of a complete ceiling system
- Only one type of channel for main and furring functions
- Increased web width for faster/easier installations and smoother joints

Knauf CT Shaftwall Stud

Knauf C-T Studs are high quality galvanized steel sections used in Knauf Shaftwall systems. Its special design allows quick and easy installation of shaftwall constructions from one side only.

For more information on wall heights / fire protection / sound ratings of Knauf shaftwall systems please refer to W62 Technical Datasheet.

Knauf J Shaftwall Track

Knauf J Tracks are high quality galvanized steel sections used as perimeter framing section of the Knauf Shaftwall system.

For more information on wall heights / fire protection / sound ratings of Knauf shaftwall systems please refer to W62 Technical Datasheet.

### Features:

- **✓** Sturdy 0.9 mm steel sections for high performance shaftwalls.
- **✓** Pullout tabs located at the web allows easy alignment of Knauf Coreboard during installation
