

MIDDLE EAST INSULATION LLC

SuperSeam (STANDING SEAM) METAL

An ideal architectural solution for almost any type of structure. Superseam products utilize state of the art continuous panel length technology to provide the perfect blend of function and aesthetics at competitive prices. Available to meet your demanding construction schedule.

The preferred roofing system for a growing number of commercial, industrial and institutional buildings because it is:

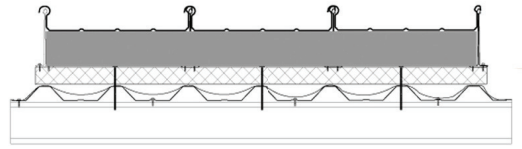

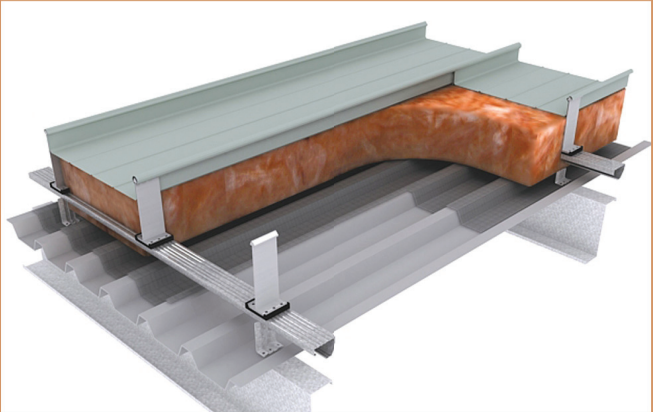

- **Design Flexible:** Steep slope, low slope and flat roof profiles
CURVES & TAPERS: the design possibilities are virtually endless. the whole system can achieve the highest possible aesthetic standards.
- **Float Action:** The roof expands and contract independent of insulation, giving the roof surface a “float” action. It handles thermal shock for permitting movement without damage.
- **Cost Effective:** longer life expectancy , less maintenance
- **Weather tight:** water barrier, The raised seam assists drainage.
- **Corrosion Resistant**
- **Environmentally Responsible:** The metal seam metal is completely recyclable.

Material:
available in G-90/ G275 hot-dipped galvanized steel, galvalume, zincalume, Aluminum, copper, zinc and stainless steel.

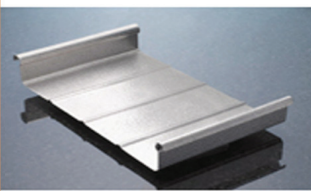

Finishes:
Polyester , Polyvinylidene fluoride (PVDF) and Polyvinyl chloride (Plastisol) based coating system that provides exceptional color stability, chalk resistance

On-site Roll Forming :
MEI has the equipment to roll the SEAM ROLL sheets on site – including tapered sheets – using its fleet of mobile roll formers.

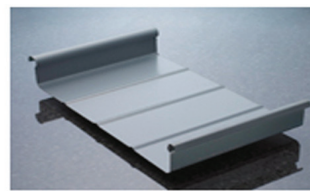

Installation & Maintenance: our team of erectors lead by professionals to provide supervision / advice if request by the customers.
