Thermal imaging cameras for building inspections and renewable energy

FLIR Systems: the world leader in thermal imaging cameras

FLIR Systems is the world leader in the design, manufacturing and marketing of thermal imaging systems for a wide variety of commercial, industrial and government applications.

FLIR Systems' thermal imaging systems use stateof-the-art infrared imaging technology that detects infrared radiation - or heat. Based on detected temperature differences, thermal imaging cameras can create a crisp image. Complicated algorithms make it also possible to read correct temperature values from this image. We design and manufacture all of the critical technologies inside our products, including detectors, electronics, and special lenses ourselves.

FLIR Systems Stockholm

FLIR Systems Boston

FLIR Systems Portland Corporate Headquarters

FLIR Systems Santa Barbara, California

Rapidly emerging markets and organization

Interestforthermalimaginghasgrownconsiderably over the last few years in a large variety of markets. To face this increased demand, FLIR Systems has expanded its organization drastically. Today we employ more than 3,200 people. Together, these infrared specialists realize a consolidated annual turnover of more than 1 billion US dollars. This makes FLIR Systems the largest manufacturer of commercial thermal imaging cameras in the world.

Manufacturing capabilities

FLIR Systems currently operates 6 manufacturing plants: three in the USA (Portland, Boston and Santa Barbara, California) one in Stockholm, Sweden, one in Estonia and one in Paris, France.

Thermal imaging: more than building a camera

There is more to the world of thermal imaging than building a camera. FLIR Systems is not only committed to providing you with the best camera, we are also able to offer you the best software, service and training to suit your thermal imaging needs.

INFRARED: more than meets the eye

Infrared - part of the electromagnetic spectrum

Our eyes are detectors that are designed to detect visible light (or visible radiation). There are other forms of light (or radiation) that we cannot see. The human eye can only see a very small part of the electromagnetic spectrum. At one end of the spectrum we cannot see ultraviolet light, while at the other end our eyes cannot see infrared. Infrared radiation lies between the visible and microwave portions of the electromagnetic spectrum. The primary source of infrared radiation is heat or thermal radiation. Any object that has a temperature above absolute zero (-273.15 degrees Celsius or 0 Kelvin) emits radiation in the infrared region. Even objects that we think of as being very cold, such as ice cubes, emit infrared radiation. We experience infrared radiation every day. The heat that we feel from sunlight, a fire or a radiator is all infrared. Although our eyes cannot see it, the nerves in our skin can feel it as heat. The warmer the object, the more infrared radiation it emits.

Ε

The infrared camera

Infrared energy (A) coming from an object is focused by the optics (B) onto an infrared detector (C). The detector sends the information to sensor electronics (D) for image processing. The electronics translate the data coming from the detector into an image (E) that can be viewed in the viewfinder or on a standard video monitor or LCD screen. Infrared thermography is the art of transforming an infrared image into a radiometric one, which allows temperature values to be read from the image. In order to do this, complex algorithms are incorporated into the infrared camera.

Why use thermal imaging cameras?

Why would you choose a FLIR thermal imaging camera? There are other technologies available to help you measure temperatures in a non-contact mode. Infrared thermometers for example.

Infrared thermometers vs thermal imaging cameras

Infrared (IR) thermometers are reliable and very useful for single-spot temperature readings, but, for scanning large areas, it's easy to miss critical parts like air leakages, areas with insufficent insulation or water intrusion.

A FLIR thermal imaging camera can scan entire buildings, heating and HVAC installations. It never misses a potential problem area no matter how small this might be.

Use thousands of infrared thermometers at the same time

With an infrared thermometer you are able to measure the temperature at one single spot. FLIR thermal imaging cameras can measure temperatures on the entire image. The FLIR i3 has an image resolution of 60×60 pixels. This means that it is equal to using 3,600 IR thermometers at the same time. If we look at the FLIR T640bx, our top model, which has an image resolution of 640×480 pixels, this means 307,200 pixels or using 307,200 infrared thermometers at the same time.

IR thermometer, temperature measurement in one spot

FLIR i3, temperature in 3,600 spots

Find problems faster and easier with extreme accuracy.

It is easy to miss a critical building problem if you are only using a spot IR thermometer. A FLIR thermal imaging camera will give you a total view of the situation and instant diagnostic insights. It not only locates a construction problem in a building but shows the full extent of problems.

Thermal imaging cameras for building applications

Since the 1970s we have become increasingly conscious that energy resources are precious and limited.

Thermal imaging cameras can help you to make insulation problems and other building anomalies clearly visible. This way not only corrective actions can be taken but also energy can be saved.

The building sector accounts for 40% of the EU's energy requirements and offers the largest single potential for energy efficiency. Due to the huge potential the European commission has formed a directive for energy performance regulation of buildings - on which many national laws already are based.

Recent economic stimulus packages in many countries, are likely to drive the demand for air tightness testing and other methods for investigating energy efficiency. The use of thermal imaging, alone or in combination with other methods, speeds up the work considerably as thermal imaging pinpoints exactly where to focus energy savings efforts - without any destructive testing.

The easiest and quickest method of detecting energy waste in buildings is thermal imaging. A thermal imaging camera shows exactly where the energy waste problems are and helps focus the inspectors attention allowing them to properly diagnose these areas of loss.

Why use thermal imaging in the building industry?

Thermal imaging reveals a hidden window construction invisible to the human eve

Leaks in an underground district heating network.

Quickly Diagnose Building Conditions:

Buildings can quickly and thoroughly be scanned using a FLIR thermal imaging camera, identifying problem areas that can not be seen by the naked eye. This ensures the integrity of both structural and environmental systems for building inspection, repair verification and insurance related purposes.

The thermal image shows mould on the interior wall due to water infiltration

☆ELIR

The thermal image shows water leakage in the roof.

Easy Non-invasive/Non-destructive Testing:

Thermal imaging can facilitate repairs quickly, easily and safely and much more cost effective than other conventional methods. A thermal imaging camera minimizes the need for building disassembly - saves time and labour by minimizing down time, repair time, labour costs and disturbance of habitants, as well as verification of a job well done.

- Check energy efficiency

Unique FLIR Systems features

As the world leader in thermal imaging cameras FLIR Systems is constantly introducing new thermal imaging cameras and features that are allowing for even more efficient and faster thermal inspections.

"Industry first" features

Connecting thermal imaging cameras with other measurement tools has become extremely important. Results need to be analyzed and need to be sent to customers or management. In order to facilitate these tasks FLIR Systems has equipped most of its thermal imaging cameras with unique, "industry first" features.

WiFi compatibility

Allows to wirelessly transfer images from your thermal imaging camera.

- Show what you are seeing to a colleague or customer that is a distance away. This is extremely useful when measurements need to be done in hard to reach areas or difficult environments.
- Analyse thermal images directly on the iPad, iPhone or Android smartphone.
- Generate comprehensive reports.
- Send the inspection reports immediately to your colleagues, customers or management via e-mail.

FLIR Tools Mobile App for Android, iPad, iPhone, and iPod Touch

FLIR leads the way with forward-thinking Wi-Fi connectivity to Android and to iPad, iPhone and iPod Touch devices. Just download the new FLIR Tools Mobile app from Android Market or from the App Store and you're ready to see, capture and import thermal images as well as to stream and capture live video from select FLIR cameras. FLIR Tools Mobile can also be used for remote control of the camera.

MeterLink

FLIR MeterLink technology makes it possible to transfer, via Bluetooth, the data acquired by an Extech moisture meter into the thermal imaging camera.

- Saves time: no need to take notes during the inspection.
- Eliminates the risk of erroneous notes.
- Speeds up the reporting process: all values are automatically included in your report.
- Combine your thermal image with measurement data.

Touch screen

An LCD touch screen brings interactivity and user comfort to a new level.

FLIR Point and shoot thermal imaging cameras

FLIR Ebx-Series

FLIR i-Series

FLIR i-Series thermal imaging cameras are ideal for users that are just discovering the benefits that thermal imaging has to offer. Extremely easy-to-use, they will help you to do your first thermal inspections.

FLIR Ebx-Series

The FLIR Ebx-Series have been developed for those that already know the benefits that thermal imaging cameras have to offer and want better image quality or more reporting options. The FLIR Ebx-Series contain a number of useful features that will speed up your inspections drastically.

FLIR i-Series

Easy-to-use point-and-shoot thermal imaging cameras

FLIR i3/i5/i7 are the smallest, lightest and most affordable thermal imaging cameras on the market. They are incredibly easy to use and require no former experience. It really is a matter of "point and shoot" to obtain high-quality thermal images that will immediately give you the thermal information you need.

Outstanding ease-of-use

Fully automatic

Focus free

The cameras are extremely easy to understand and operate, designed for entry-level users. The cameras are intuitive and come with a full manual.

Αυτο

The fixed focus free lens makes using the FLIR i3/i5/i7 a snap.

FLIR i3/i5/i7 produce instant, point-and-shoot JPEG thermal

imagery with all required temperature data included.

Compact and lightweight

FLIR i3/i5/i7 weighs only 365 g, and is easy to store in a belt pouch.

Extremely rugged

FLIR i-Series thermal imaging cameras withstand a 2 meter drop. They are watersplash proof and IP43 rated.

SD card storage

Stores images with unique ID in radiometric JPEG format, containing all temperature data, on a standard miniSD card. USB file transfer to PC.

Reporting and analysis software included

FLIR Tools software is included and the cameras are also compatible with the more powerful FLIR Reporter.

Measure temperatures

Measures temperatures up to +250°C and detects temperature differences as small as 0.10°C (0.15°C for FLIR i3).

Measurement functions

Spotmeter, box with max./min. temperatures, isotherm above/below.*

* Features dependant on camera model, please check technical specifications for more details.

Quickly diagnose Building conditions

The thermal inspection locates missing insulation in the roof. This can now be repaired and further energy loss prevented.

Detect plumbing issues

The blockage in this pipe is quickly located using a thermal camera. Action will be taken before the problem gets worse.

Save time and money in 3 steps:

- Detect hidden problems, make quick damage assessments and perform preventive inspections
- Identify energy losses and poor insulation
- Spot electrical faults before it is too late
- Produce instant thermal images of your findings
- Create reports, analyse and document your findings with the easy-to-use software

FLIR Ebx-Series

Lightweight design, Heavyweight performers

The FLIR Ebx-Series are small and lightweight thermal imaging cameras designed for those needing higher resolution and more features and for whom documentation of findings are important.

The FLIR Ebx-models include the features you need to make well informed building decisions like built-in insulation and dew point alarms. The cameras are specifically designed for building inspections such as, HVAC heating and cooling issues, air flow, moisture detection, insulation problems, and much more.

Up to 320 x 240 pixels resolution

The FLIR Ebx-Series thermal image resolution ranges from 160x120 pixels to 320x240 pixels depending on camera model. Every additional pixel means more valuable temperature information to isolate problem areas.

Compact and lightweight

FLIR Ebx-Series models weigh only 825g (battery included).

Extremely rugged

FLIR Ebx-Series thermal imaging cameras withstand a 2 meter drop. They are IP54 rated.

High quality visual camera

Visible light camera makes observing and inspecting faster and easier.

Thumbnail image gallery

An easy-to-access thumbnail image gallery helps you to quickly review and find your thermal images.

± 2% accuracy

High accuracy of ± 2% or ±2°C of reading.

LCD touch screen Large 3.5" LCD color touch screen.

Built-in LED light

The built-in LED lamp ensures quality visual images regardless of job site lighting levels.

Long life battery

With a 4 hour battery life its easy-to-replace Lithium lon batteries will keep up with your demanding schedule.

Laser Pointer

A conveniently located button activates the laser pointer that will help you associate the hot or cold spot in the IR image with the real physical target in the field.

Picture-in-Picture (PiP)

With the PiP-function it is easy to locate areas of interest.*

Thermal Fusion

Merges visual and thermal images to offer better analysis.*

Instant reports

Create instant reports directly in camera. Easy to copy reports to USB.*

Humidity / Insulation Alarm

The Relative Humidity Alarm alerts you to the areas where there is a risk of condensation. An Insulation Alarm shows the insulation performance of the building structure.

Text and voice annotations

Text comments can be made from a pre-defined list or by using the touch screen. A headset can be connected to make voice annotations.*

Interchangeable lenses

In order to adapt the FLIR Ebx-Series to every situation both wide angle and tele-lenses are available.

* Features dependant on camera model, please check technical specifications for more details.

Large 3.5" touchscreen

Large backlit buttons fit bare hands or gloves

Connect to smartphone or tablet via Wi-Fi, using the FLIR Tools mobile app (Apple iOS and Android) for processing and sharing results as well as for remote control.

The FLIR Ebx-Series is equipped with a digital camera, a LED lamp and a laser pointer.

Inspect photovoltaic cells

Defects in photovoltaic cells are clearly visible on a thermal

A full product range

At FLIR Systems we realize that different users have different needs. Therefore we have developed a full product range of thermal imaging cameras. More advanced models contain more features and allow to do your work faster and more efficient. They are the ideal tools for the expert and professional users.

Expert and professional models: better image quality

Just like in photography, having an image which is composed of more pixels means that the camera produces higher quality images. But there is more. A thermal imaging camera with 640 x 480 pixels has 307,200 temperature measurement points in one image which is four times more than a camera with 320 x 240 pixels and 76,800 temperature measurement points. When looking at the same target from the same distance, more pixels will cover the target. This will result in much better measurement accuracy.

Thermal images, with different resolutions, of a wall

Image taken with 120 x 120 pixels resolution.

Image taken with 320 x 240 pixels resolution.

Image taken with 640 x 480 pixels resolution. The increased number of pixels will result in a much clearer picture where small details are very visible.

Ergonomics

When you are an expert or professional and using your camera several hours per day you need an ergonomic tool. No matter where the area to be inspected is located, you need to be able to handle your camera in an easy, ergonomic way. This will not only increase your analysis capabilities in the field but it will also increase your productivity.

Multi Spectral Dynamic Imaging (MSX)

A new, patent-pending fusion based on FLIR's unique onboard processor that provides extraordinary thermal image details in real time.

- · Real-time IR video enhanced with visible spectrum definition
- · Exceptional thermal clarity to highlight exactly where the problem is
- Easier target identification without compromising radiometric data
- · Quality so good, you won't need a separate digital photo for reports

Unlike traditional thermal fusion that inserts an IR image into a visiblelight picture, FLIR's new MSX embosses digital camera detail onto thermal video and stills.

Instant Results:

- · Sharper-looking thermal images
- Quicker target orientation
- · Clutter-free reports
- · Faster route to solutions

Thermal image of a building.

Thermal image of the same building, now using the MSX-setting. Note that more details are visible, making it easy to locate ventilation grids and see brick structure. The MSX feature gives depth to your thermal image.

Image sketch

This new FLIR Systems feature allows to clearly indicate on a saved image the location of the problem area both on the thermal and the visual image. This can be done immediately on the touch screen of the camera. The indications you make on the thermal image will automatically appear in your report.

Continuous auto-focus

A solution with two digital cameras allows for continuous autofocus of the thermal images. Continuous auto-focus makes the FLIRT640bx the first fully automatic thermal imaging camera on the market.

FLIR T400bx-Series

FLIR T600bx-Series

FLIR B600-Series

FLIR B250 & B335 The FLIR B250 and B335 take ergonomics to a new level. Thanks to a tiltable lens unit you are able to always hold the camera in a comfortable postion.

T400bx-Series

The FLIR T400bx-Series offers a good performance at an affordable price. Excellent ergonomics and easy communication make the FLIR T400bx-Series a truly userfriendly camera for the beginner and advanced user.

FLIR T600bx-Series

The FLIR T600bx-Series is designed for the expert requiring the highest performance and the latest technology available. The cameras combine excellent ergonomics with superior image quality of 640 × 480 pixels IR resolution. The cameras are flexible and can meet your every need, and have extensive communication possibilities.

FLIR B600-Series

The FLIR B600-Series is an IRcamera designed for the thermography expert having the camera as the number one tool. The B-series cameras offer a superior image quality, the highest sensitivity and accuracy as well as the widest array of possibilities available. All tailor made to fulfill the demand of the expert depending on an accurate and full featured instrument to perform the work.

FLIR B250 / B335

The FLIR B-Series of portable thermal imaging cameras takes ergonomics, weight and ease-of-use to a new level. Usability is key: our engineers have translated user feedback on comfort and clarity into a series of comprehensive and innovative features. Furthermore, the FLIR B-Series has been specifically developed for building environments. It contains features like dewpoint and insulation alarms that will make the life of any building thermographer a lot easier.

Up to 320 x 240 pixel resolution

The B-Series thermal image resolution ranges from 240 x 180 pixels to 320 x 240 pixels.*

Camera sensitivity

The thermal sensitivity in the FLIR B-Series ranges from 70 mK to < 50 mK.*

High quality visual camera

All models in the FLIR B-Series have an integrated 3.1 Mpixel digital camera. This makes observing and inspecting faster and easier.

Panorama support

Take images in a sequence and automatically combine them to one large image using the FLIR software. The images can be shot in vertical or horizontal direction or in a combination of the two.

Measurement range

Temperature measurement range -20°C to +120°C.

Interchangeable infrared lenses

The B-Series features a standard 25° lens and optional 6°, 15°, 45° and 90° lenses.

Flexible interfaces

The B-Series is equipped with standard video, USB outputs as well as a removable SD card.

MPEG-4 video

Create visual and infrared non radiometric MPEG-4 video files.

Radiometric IR video streaming

16 bit radiometric IR video can be streamed to a PC (via USB) running the FLIR software.*

Picture-in-Picture

Create an infrared overlay on your visual image. Scalable, moveable and resizable.

Text and voice annotations

Text comments can be made from a pre-defined list or using the touch screen. A headset can be connected to make voice annotations.

Sketch annotations

Use the touch screen as pen and paper to add sketch annotations.

Image storage

FLIR uses a non proprietary radiometric JPEG image format that allows for post processing and report writing with Microsoft Word® based FLIR software.

Touch screen

3.5" LCD touch screen plus stylus brings interactivity and user comfort to a new level.

Measurement Modes

Measurement spots, area with auto hot/cold spot indication, isotherms, ΔT calculation.

Copy to USB

Transfer on board images or reports directly from the thermal imaging camera to a USB stick.

Humidity Alarm/Insulation Alarm

The Relative Humidity Alarm alerts you to the areas where there is a risk of condensation. An Insulation Alarm shows the insulation performance of the building structure.

* Features dependant on camera model, please check technical specifications for more details.

NEW FEATURES **FLIRT600bx-Series**

State-of-the-art thermal imaging cameras that combine good ergonomics and flexibility with high image quality

The FLIRT600-Series offer a crisp thermal image of up to 640 x 480 pixels on which the smallest of details can be seen. The T600-Series is flexible and can meet your every need, and has extensive communication possibilities.

Up to 640x480 pixel resolution

The high definition 640x480 pixels detector generates crisp and clear detailed images that are easy to interpret, resulting in reliable inspections with higher accuracy.

High sensitivity

The T640bx allows you to see temperature differences as small as 0.035°C.

Tiltable IR unit

The tiltable IR unit gives you great flexibility and allows you to work faster and in a comfortable position during your inspections.

Large bright 4.3 inch LCD screen

The high quality LCD screen presents sharp and bright images also in outdoor environments.

Viewfinder (T640bx)

The high-resolution viewfinder is ideal for outdoor use or when the LCD screen is not used.

High quality visual camera

An integrated 5 megapixel visual camera generates crisp visual images in all conditions. Field of view adapts to IR lens.

Laser Pointer

The position of the laser pointer is highlighted on the IR-image, which helps you associate the hot spot in the image with the physical target.

Flexible interfaces

Easy access to Digital Video Interface, USB for connecting external devices, USB2 for PC communication and a direct connection to charge the battery inside the camera.

Radiometric IR video streaming

16 bit radiometric IR video can be streamed to a PC (via USB) running the FLIR software.

MPEG-4 video

Create visual and infrared non radiometric MPEG-4 video files.

Picture-in-picture

Create an infrared overlay on your visual image. Adapts automatically to different lenses with different field of view. Moveable and resizable depending on camera model.

Touch screen

The LCD touch screen brings interactivity and user comfort to a new level. In combination with the large backlit buttons and joystick control the T600bx-Series is very easy to use.

Sketch annotations

Text and voice annotations

Include a sketch with the thermal image of the inspected object, just draw it on the touch screen.

Text comments can be selected form a list. A

Bluetooth headset can be connected to make voice

annotations.

Digital zoom The FLIRT640bx is equipped with a 1-8x continuous digital zoom and the T600bx/T620bx with a 1-4x zoom.

Humidity Alarm/Insulation Alarm

The Relative Humidity Alarm alerts you to the areas where there is a risk of condensation. An Insulation Alarm shows the insulation performance of the building structure. By inputting relevant values into the camera the areas that fail to fulfill requirements will appear as colored.

FLIR Thermal Fusion

Merges visual and thermal images for better analysis.

New features

Multi Spectral Dynamic Imaging (MSX)

The innovative MSX feature produces an image more rich in every detail than ever before.

Image sketch Indicate problem areas directly on the thermal

image.

Continuous auto-focus Continuous automatic focus on the object that you are inspecting.

Built-in GPS

GPS allows to georeference thermal images to determine their geographic location.

Compass

The direction in which the camera is looking is automatically added to every image.

Features dependant on camera model, please check technical specifications for more details.

Connect to smartphone or tablet via Wi-Fi, using the FLIR Tools mobile app (Apple iOS and Android) for processing and sharing results as well as for remote control.

FLIR T600bx-Series Model Comparison

FLIR T600bx

Thermal image quality: 480x360 pixels Thermal sensitivity: <40 mk @ +30°C Temperature range: -40°C up to +350°C 1-4x continuous, digital zoom

FLIR T620bx

Thermal image quality: 640x480 pixels Thermal sensitivity: <40 mk @ +30°C Temperature range: -40°C up to +650°C 1-4x continuous, digital zoom GPS Instant Report

FLIR T640bx

Thermal image quality: 640x480 pixels Thermal sensitivity: <35 mk @ +30°C Temperature range: -40°C up to +650°C 1-8x continuous, digital zoom GPS Instant Report MSX Image sketch on IR and visual Continuous auto-focus Viewfinder Live line profile Measurement presets

FLIR B620 & FLIR B660

Thermal imaging cameras designed for the expert.

A FLIR B620/660 camera is the perfect instrument for users who know the advantages that thermal imaging has to offer, and who rely on a thermal imaging camera at work. Whether you are a thermography consultant or a building professional the FLIR B620/660 thermal imaging cameras will help you trace anomalies invisible to the human eye.

640x480 pixel resolution

The FLIR B620/660 have a high resolution pixel detector of 640x480 pixels that allows more accuracy and shows more details at a longer distance.

High sensitivity (B660)

< 30 mK thermal sensitivity captures the finest image details and temperature difference information.

High quality visual camera

An integrated 3.2 megapixel visual camera for generating crisp visual images in all conditions.

Contrast Optimizer (B660)

Automatic optimization of brightness and contrast adjustments to make it easier to make thermal analyzes of detailed objects.

Panorama support

Take images in a sequence and automatically combine them to one large image using the FLIR Reporter software.

Built-in GPS (B660)

GPS allows to georeference infrared images to determine its geographic location.

Laser Pointer

Helps you associate the hot or cold spot in the IR image with the real physical target in the field.

Flexible interfaces

Easy access to composite video connection, USB, FireWire, and a direct connection to charge the battery inside the camera.

MPEG-4 video

Create visual and infrared non radiometric MPEG-4 video files.

FLIR Thermal Fusion

Merges visual and infrared images to offer better analysis.

Picture-in-picture

Create an infrared overlay on your visual image. Moveable and resizable.

Automatic- and Manual focus, Digital zoom Focus possibilities include; single shot auto focus, continuous auto focus, laser based (B660) or manual focus.

Radiometric JPEG

FLIR uses a non proprietary radiometric JPEG image format that allows for post processing and report writing with Microsoft Word[®] based FLIR software.

Text and voice annotations

Text comments can be uploaded through a wireless IrDa interface. A Bluetooth[®] wireless headset can be connected to make voice annotations which are stored with the image.

Automatic- and Manual focus, Digital zoom

Focus possibilities include; single shot auto

focus, continuous auto focus, laser based (B660)

or manual focus.

C

Tiltable viewfinder

The high-resolution viewfinder is tiltable and can be adapted to the individual user. It is ideal for outdoor use or when the LCD screen is not used.

Large LCD screen

Super size 5.6" foldable high-quality LCD screen allows you to see the smallest details and temperature differences.

Multi-angle handle with integrated direct access buttons

A turnable control grip allows you to use the camera in the most comfortable position. The buttons and joystick to control the camera are integrated in this handle.

For increased flexibility the operator can program buttons located on the top of the camera for direct access to favourite functions.

Humidity Alarm / Insulation Alarm

The Relative Humidity Alarm alerts you to the areas where there is a risk of condensation. An Insulation Alarm shows the insulation performance of the building structure.

Relative humidity alarm

The relative humidity alarm alerts you to the areas where there is a risk of condensation. In the image below the area at risk is indicated as blue color.

Insulation alarm

The insulation alarm shows where the areas below or above a set temperature are by making them appear in a different color.

Connect to smartphone or tablet via Wi-Fi, using the FLIR Tools mobile app (Apple iOS and Android) for processing and sharing results as well as for remote control.

Software

At FLIR Systems, we recognize that our job is to go beyond just producing the best possible thermal imaging camera systems. We are committed to enabling all users of our

Turning tools into solutions

thermal imaging camera systems to work more efficiently and productively by providing them with the most professional camera-software combination.

Our team of committed specialists are constantly developing new, better and more user-friendly software packages to satisfy the most demanding thermal imaging professionals. All software allows fast, detailed and accurate analysis and evaluation of thermal inspections.

FLIR Reporter

Creating compelling and professional reports

FLIR Reporter is a powerful software for creating compelling and professional reports with powerful new TripleFusion, Picture-in-Picture, and the latest Microsoft operating system and Word compatibility.

Flexible report design and layout

- Fully integrated with Microsoft Word[™]
- Powerful temperature analysis
- Wizard-guided report generation
- TripleFusion Picture-in-Picture (movable, sizable, scalable)
- Automatic report generation by drag-and-drop
- Predictive trending functionality
- Automatic link to Google[™] Maps for images with GPS coordinates

TripleFusion Picture-in-Picture capabilities

FLIR Reporter's Picture-in-Picture (PIP) features to make your reporting easy and efficient. Simply download thermal and visible images to Reporter. Easy-to-use dialog boxes and drag-and-drop features help you superimpose a smaller thermal image inside the visible light photo.

Automatic report generation

With FLIR Reporter it's easy to create customized reports. The ReportWizard guides you step-by-step to make a professional inspection report.

Compatible with GPS

For FLIR customers having built-in GPS capability with their cameras, FLIR Reporter provides an automatic link to Google™ Maps for images with GPS coordinates.

Predictive trending functionality

Trending is a powerful tool to help you track thermal information relating to your thermal surveys. Armed with this information you can better determine when maintenance procedures need to be performed.

More advanced features

FLIR Reporter includes numerous advanced features, including: digital zoom, color palette changes, play back of voice comments recorded in the field. Automate calculations with the powerful formula tool and the time-saving one-click ΔT function. Instant report summary creation with the Summary Table tool. Histogram and line profile graph features to facilitate more advanced analysis.

FLIR Reporter allows for fast and easy generation of professional inspection reports.

FLIR Reporter Key features:

- Flexible report page design and layout for customized reports
- Use quick insert function to easily create custom report pages
- · Fully integrated with standard Microsoft Word
- Generates reports in standard MS Office format and PDF-format
- Powerful temperature analysis
- Triple Fusion Picture-in-Picture (movable, sizable, scalable)
- Rapid report manager supporting automatic report generation by drag-and-drop
- Trending functionality
- Spell check
- Automatic summary table for the report

- Automatic link to Google[™] Maps for images with GPS coordinates
- Fine tune images and make full temperature analysis directly in Microsoft Word
- Create your own formulas including measurement values from images
- · Play radiometric sequences directly in the report
- Search functionality to quickly finding images for your report
- Panorama tool for combining several images to a larger image
- Windows 7, 32 and 64-bit
- Support for MeterLink[™] data
- *.docx compatibility
- Grid function

FLIR Tools: Software with every thermal imaging camera

FLIR Systems has since long realized the importance of making inspection reports. That is why every FLIR Systems thermal imaging camera is coming with software that allows users to organize and analyze the images from their thermal imaging cameras and present them in a report. The software allows for adjusting image settings such as color palette, level and span.

Users that want more flexibility and more analysis tools can choose for FLIR Reporter.

FLIR Tools Mobile

FLIR Tools Mobile App for Android, iPad, iPhone, and iPod Touch

FLIR leads the way with forward-thinking Wi-Fi connectivity to Android and to iPad, iPhone and iPod Touch devices. Just download the new FLIR Tools Mobile app from Android Market or from the App Store and you're ready to see, capture and import thermal images as well as to stream and capture live video from select FLIR cameras.

FLIR Tools Mobile can also be used for remote control of the camera.

FLIR Infrared Training Center

The Infrared Training Center (ITC) offers the world's leading infrared training and thermographer certification programs.

Although all our cameras are designed for easy installation and operation, there is a lot more to thermal imaging than just knowing how to handle the camera. As the leading company for thermal imaging technology, we like to share our knowledge with our customers and other interested parties.

We therefore organize regular courses and seminars. We also organize in-company training on request, so that you, or your staff, can gain familiarity with thermal imaging and its applications.

The ITC not only welcomes FLIR Systems customers but also users of other brands of cameras. In fact, anyone who wants to learn more about thermal imaging for any applications, before deciding to purchase a camera, is also invited.

The mission of the ITC is to make our customers and partners successful by enhancing their knowledge of IR technology, thermal imaging products, and relevant applications. The ITC offers a portfolio of courses that presents the right mix of theoretical and practical content to help professionals quickly apply thermal imaging technology to real life applications.

All our instructors are experienced thermal imaging specialists. Not only do they have a profound theoretical knowledge but they also have practical experience with numerous applications. For our customers, this means that attending one of the ITC's courses will give them a real hands-on learning experience.

Follow one of our courses and become a thermal imaging expert.

Each ITC course is a perfect combination of theoretical fundamentals and practical excercises. It guarantees participants a real hands-on learning experience.

After Sales

FLIR After Sales

At FLIR Systems, building a relationship with a customer takes more than just selling a thermal imaging camera. After the camera has been delivered, FLIR Systems is there to help meet your needs.

Once purchased, thermal imaging cameras are vital pieces of equipment. To keep them running at all times, we operate a worldwide service network with subsidiaries in Belgium, China, France, Germany, Hong Kong, Italy, the Netherlands, Sweden, United Arab Emirates, the United Kingdom and the USA.

If there should be a problem with one of our camera systems, these local service centers have all the know-how and equipment to solve it within the shortest possible time. Local camera service gives you the assurance that your system will be ready for use again within an extremely short timeframe.

Buying a thermal imaging camera is a long-term investment. You need a reliable supplier who can provide you with support over a long period of time. Our service personnel regularly follows training programs at our production facilities in Sweden or the USA. Not only to learn about the technical aspects of the products, but also to familiarize themselves with your individual customer requirements and the latest applications.

Different types of maintenance contracts can be offered to make sure that, whatever happens, your thermal imaging camera is always available for use.

CUSTOMER CARE is not just a slogan. We write it in capital letters at FLIR.

Accessories

Flexible systems that meet your changing needs

FLIR offers a wide variety of accessories to tailor your camera to your needs.

In today's fast-changing environment, requirements for purchased capital equipment can change from year to year or from project to project. Things that are vital today can be redundant tomorrow.

That makes it important for the equipment in which you invest to be flexible enough to meet the ever-changing needs of your applications. No other thermal imaging camera manufacturer offers a wider range of accessories than FLIR Systems.

Hundreds of accessories are available to customize our cameras for a wide variety of imaging and measurement applications.

From a comprehensive range of lenses, through LCD screens to remote control devices, everything is available to tailor your camera to your own, specific application.

A wide variety of accessories is available for every FLIR thermal camera

General

Incode a Deufermanne	
Imaging Performance	
Field of view (FOV) / Minimum focus distance	25° × 19° / 0.4 m
Spectral range	7.5 - 13 μm
Spatial resolution (IFOV)	1.82 mrad for B250 - 1.36 mrad for B335
Image frequency	9 Hz or 30 Hz
Focus	Automatic or manual
Focal Plane Array (FPA)	Uncooled microbolometer
Image presentation	
Display	Built-in touch screen, 3.5″ color LCD, 320 x 240 pixels
Image modes	IR image, Visual image, Picture in Picture, Thumbnail gallery
Measurement	
Accuracy	±2 °C or 2% of reading
Object temperature range	-20 °C to +120 °C
Measurement analysis	
Spotmeter	5
Area	5 boxes with max/min/average
lsotherm	Detect high/low temperature/interval
Humidity alarm	1 humidity alarm including dew point alarm
Insulation alarm	1 insulation alarm
Automatic hot / cold detection	Auto hot or cold spotmeter markers within area
Emissivity correction	Variable from 0.1 to 1.0 or selected from list of materials
Measurement corrections	Reflected temperature, optics transmission and atmospheric transmission
External optics/windows correction	Automatic, based on inputs of optics/window transmission and temperature
Setup	
Color palettes	BW, BW inv, Iron, Rain, Rain HC & Bluered
Set-up controls	Local adaptation of units, language, date and time formats; automatic shutdown, display intensity

General

maging Performance R resolution	640 x 480 pixels
Spectral range	7.5 - 13 μm
mage frequency	30 Hz
ocus	Automatic or manual
Focal Plane Array (FPA)	Uncooled microbolometer
mage presentation	
Display	Built-in Widescreen, 5.6″ color LCD, 1024 x 600 pixels
/iewfinder	Built-in, tiltable LCD, 800 x 600 pixels
Automatic image adjustments	Continuous/manual; linear or histogram based
Aanual image adjustments	Level/span/max./min.
mage modes	IR image, Visual image, Thumbnail gallery, Thermal Fusion, Picture in Picture
Reference image	Shown together with live IR image
Vleasurement	
lemperature range	-40°C to +120°C (optional up to +2000°C)
Vleasurement analysis	
sotherm	2 with above/below interval
Difference temperature	Delta temperature between measurement functions or reference temperature
Automatic hot / cold detection	Max./Min. temp. value and position shown within box, circle or on a line
lumidity alarm	1 humidity alarm including dew point alarm
nsulation alarm	1 insulation alarm
Veasurement function alarm	Audible/visual alarms (above/below) on any selected measurement function
Reference temperature	Manually set or captured from any measurement function
Emissivity correction	Variable from 0.01 to 1.0 or selected from list of materials
Measurement corrections	Reflected temperature, optics transmission, atmospheric transmission
External optics/windows correction	Automatic, based on inputs of optics/window transmission and temperature
Setup	
Set-up controls	Local adaptation of units, language, date and time formats; automatic shutdown, display intensit
Programmable buttons	2
mage storage	
Type	SD memory card
Format	Standard JPEG - 14 bit measurement data included
Vlodes	IR/visual images, simultaneous storage of IR and visual images, visual image is automatically
	associated with corresponding IR image
Periodic image storage	Every 10 seconds up to 24 hours
Panorama	For creating panorama images FLIR Reporter software
mage annotations	
/oice	60 seconds stored with the image (via Bluetooth®)
Text	Predefined text or free text from PDA (via IrDA) stored with the image
mage marker	4 on IR or visual image
	+ on m or visual image
Digital camera	
Built-in digital camera	3.2 Mpixel auto-focus with video lamp
Laser Pointer	
_aser	Semiconductor AlGaInP diode laser, Class 2
Video streaming	
Non-radiometric IR video streaming	MPEG-4 to PC using USB or WLAN (optional)
Power System	
Battery time	Rechargeable Lithium Ion battery, field replaceable
Battery operating time	3 hours
Charging system	In camera, AC adapter, 2-bay charger or 12 V from a vehicle
Power management	Automatic shutdown , and sleep mode (user selectable)
AC operation	AC adapter, 90-260 V AC, 50/60 Hz
Adaptor voltage	12 V DC out
Environmental specifications	
Operating temperature range	-15 °C to +50 °C
Storage temperature range	-40 °C to +70 °C
Humidity (operating and storage)	IEC 68-2-30/24 h 95% relative humidity +25 °C to +40 °C
Shock	25 g (IEC 60068-2-29)
/ibration	2 g (IEC 60068-2-6)
Encapsulation	IP 54 (IEC 60529)
nterfaces	
JSB-A	Connect external USB device (copy to memory stick)
JSB Mini-B	Data transfer to and from PC / streaming MPEG-4
Composite video	PAL or NTSC
rDA	For sending text comment files from PDA to camera, wireless transfer of text
VLAN	Optional
leadset connection	Yes
NiFi	Connects directly to Ipad/Iphone for image transfer or via local network
Physical characteristics	
Camera weight, incl. battery	1.8 kg
Camera size ($L \times W \times H$)	299 x 144 x 147 mm
Shipping size	520 x 400 x 200 mm
Shipping Size	8.2 kg
Shipping weight	0.2 Ky

Battery charger, Calibration certificate, FLIR loois^{IM} PC software CD-RUM, FireWire cable, 4/6, FireWire cable, 6/6, Bluetooth[®] headset, Bluetooth[®] USB micro adaptor, Headset, Lens cap (mounted on lens), Lens cap (2 ea.), Power supply including multi plugs, Memory card-to-USB adaptor, Memory card with adaptor, Power supply, Printed Getting Started Guide, Printed Important Information Guide, Shoulder strap, USB cable, User documentation CD-ROM, Video cable, Warranty extension card or Registration card

FLIR i3 / i5 / i7

Accessories

Power

Car charger [T911025] This cable is used to power the thermal imaging camera from the 12 V socket in a car.

[T197410] Battery Extra battery that will allow you to spend extra time in the field doing inspections.

Power supply incl. Multi-plugs [T910711] This power supply is used when powering the camera from the mains supply or to charge the batteries. It comes with different types of plugs.

Accessories

Hard transport case	[T197619]
Rugged, watertight plastic shipping case. Holds all items securely	
be locked with padlocks and features a breather valve to prevent up in airplane cargo holds.	pressure build-
Pouch	[T911085]

Pouch Soft pouch to protect the camera. Including shoulder strap.

	Tool belt Tool belt for thermal imaging camera pouches.	[T910933]
122	Memory card micro-SD with adaptors Capture images on the go with your camera. These small cards are and can hold a great amount of data.	[T910737] e easy to use
		[1010400]

USB cable Std-A <-> Mini-B USB cable to connect the camera. [1910423]

FLIR Ebx-Series

Accessories

Power

Cigarette lighter adaptor kit, 12 V DC, 1.2 m [1910490] Can be used to power the camera from the cigarette lighter socket in a car.

Battery	
High capacity battery for the IR can	n

High capacit	ty battery for	r the IR cam	era.	

[T198125]

[T910814]

[T197752]

Power supply incl. Multi-plugs

This power supply is used when powering the camera from the mains supply or to charge the batteries. It comes with different types of plugs.

Storage

Memory card micro-SD with adaptors

[T910737]

[1910423]

[T911087]

[T911093]

Capture images on the go with your camera. These small cards are easy to use and can hold a great amount of data.

Miscellaneous

USB cable Std-A <-> Mini-B USB cable to connect the camera.

Video cable [1910582] This cable can be used to transfer the images of the E-Series thermal imaging cameras to a monitor.

[T197926] **Tripod adapter** Tripod adapter, necessary to be able to mount the camera on a tripod.

Bluetooth headset [T197771] The Bluetooth headset can be used for annotation thermal images with voice messages. There is a wireless connection between the camera and the headset.

Pouch, including shoulder strap, for FLIR Exx series.

Pouch

Tool belt

Tool belt for thermal imaging camera pouches. Hard transport case [T197935] Rugged, watertight plastic shipping case. Holds all items securely. The case can be locked with padlocks and features a breather valve to prevent pressure buildup in airplane cargo holds. Sun shield [T127100]

Snap-on sunshield to increase visibility of the LCD display.

Extech Clamp meter EX845 Can be connected to the thermal imaging camera through MeterLink™

[T910972]

Extech Moisture meter MO297

[T910973]

Can be connected to the thermal imaging camera through MeterLink™

Lenses

Lens 10 mm, 45° field of view incl. case

[1196960]

[1196961]

Sometimes there isn't enough room to step back and see the whole picture. This wide angle lens has a field of view almost double than the one of the standard 25° lens. Perfect for wide or tall targets such as electrical panels or paper machinery.

Lens 30 mm, 15° field of view, incl. case

When the target in question is a distance away it may be useful to use a telescope lens. The 15° lens is a popular lens accessory and provides almost 2X magnification compared to the 25° lens. Ideal for small or distant targets such as overhead power lines.

FLIR B250 / B335

Accessories

Power [1196398] Battery Extra battery that will allow you to spend extra time in the field doing inspections. 2-bay battery charger, incl. power supply with multi-plugs [T197650] This 2 bay battery charger is used for charging FLIR Systems' camera batteries. Cigarette lighter adaptor kit, 12 V DC, 1.2 m [1910490] Can be used to power the camera from the cigarette lighter socket in a car. Power supply incl. Multi-plugs [T910750] Combined power supply, including multi plugs and battery charger to charge the battery when it is inside or outside of the camera. **Battery package** [T197667] A complete battery package consisting of three standard products: a battery, 2-bay battery charger including power supply with multi-plugs and a cigarette lighter adaptor kit. Storage [T910737] Memory card micro-SD with adaptors Capture images on the go with your camera. These small cards are easy to use and can hold a great amount of data. [1910475] Adaptor, SD memory card to USB Allows to transfer the images from the SD card to a PC. Miscellaneous Hard transport case [1196895] Rugged, watertight plastic shipping case. Holds all items securely. The case can be locked with padlocks and features a breather valve to prevent pressure buildup in airplane cargo holds. **Neck strap** [1124544] Ties the camera around your neck so that it is protected against falling. Pouch [1124545] Soft pouch to protect the camera. [1123970] Sun shield Snap-on sunshield to increase visibility of the LCD display. Extech Clamp meter EX845 [T910972] Can be connected to the thermal imaging camera through MeterLink™

Thermal imaging guidebook for building and renewable energy applications

Thermal imaging cameras are being used for a wide variety of building applications.

This booklet is an in-depth guide for these building applications. Not only does it give a comprehensive overview of a large number of applications, it also explains how to do thermal inspections in an efficient way, what you should pay attention to when buying a thermal imaging camera and much more.

These details and many other key thermal imaging aspects are all covered in this 68-page hard-copy guide.

You can order a free hard-copy of the guide on our website: www.flir.com

Application stories

FLIR Systems regularly publishes application stories in which customers are explaining what they are doing with a FLIR thermal imaging camera and how it helps them to save time and money. All application stories can be downloaded from our website: **www.flir.com**
